0.1 | Introduction

0.1.1 | Synopsis

Ďraħýl Rase is a highly agglutinative language featuring some fusional elements, with an ergative-secundative alignment. In particular, *coaspects* and *aspects* can be stacked on nouns and verbs, respectively. The language employs dependent-marking dominantly, although some head-marking is present.

Ďraħýl Rase lacks adjectives and adpositions, and has only a few adverbs; in addition, some concepts common in English, such as *to be* or *good* are absent in the language. It also uses relational nouns extensively.

This combination of features allows sentences in Ďraħýl Rase to be concise (unlike in English) while still being understandable (unlike in Ithkuil).

0.1.2 | External history

As a constructed language, Ďraħýl Rase is developed synchronically. It was first conceived in the December of 2016, although it wasn't until February 2017 that verbs were added.

Until 23 April 2017, Ďraħýl Rase left the ergative case unmarked and the absolutive case marked. Since marked-absolutive languages are nouns that start with <ĥ>¹, the alignment was changed to a prototypical ergative-absolutive system.

Starting in 19 June 2017, the \LaTeX version of the Ďraħýl Rase grammar was developed. This update added considerable changes to the language:

- /ĥ/ was written as <ḥ̂> before the standardisation. This was changed to <ĥ>.
- Well-defined rules for when to use zero-marked genitives were added.
- Formerly, only the human non-elite first and second pronouns were present. The standardisation added the other pronouns that we enjoy today.
- Aspects gained formal names, and some aspects, such as the evident or analogous aspects, were also added.
- The pre-standardisation grammar had sensory affixes for verbs. These were removed because they proved to be redundant.
- Comparatives and superlatives received well-defined rules, and the subject of comparison is no longer forced to be the absolutive argument of a sentence without an ergative argument.
- N-verbs were defined, breaking the complete regularity of the morphosyntactic alignment.
- Quotatives received more precise rules.
- There is a new chapter on semantics.
- Due to uncanny font magic, *Nasél Tēkel Piva*, the script of Ďraħýl Rase is also covered.

1 | Phonology and orthography

1.1 | Consonants and vowels

Ďraħýl Rase uses the following phonemes:

Table 1.1: The consonants of Ďraħýl Rase, with their romanisations.

	Bilabial / Labiodental	Alveolar	Retroflex	Velar	Pharyngeal	Glottal
Nasal	m	n		ŋ /ŋ/		
Plosive	p b	t d	ʈ /ʈ/ ɖ /ɖ/	k g		
Fricative	f v	s z		ħ /x/ ʕ /ʕ/	ħ	h
Lateral Fricative		ʂ /ʂ/ ʐ /ʐ/				
Approximant		r /ɹ/				
Lateral Approximant		l				

Table 1.2: The vowels of Ďraħýl Rase, with their romanisations.

Short	Long	Semivowel
a	â /ä:/	
e	ê /ɛ:/	
i	î /i:/	j
o /ʌ ~ ɤ/	ô /o:/	
u /u ~ i/	û /u:/	w
y /i/	ÿ /y:/	ÿ /y/

Voiceless plosives can also be geminated after a short vowel.

1.1.1 | Diphthongs

A diphthong consists of a vowel and a semivowel, in either order, excluding *⟨ij⟩, *⟨ji⟩, *⟨uw⟩, *⟨wu⟩, *⟨yÿ⟩ and *⟨ÿy⟩, which decay into their respective long vowels. The “dominant” vowel is pronounced as its long form; e. g. ⟨ej⟩ is pronounced [ej̃].

1.2 | Phonotactics

A syllable is allowed to consist of:

- an onset, from one of:
 - a single consonant
 - a plosive or fricative plus <r>, <l> or (depending on voicing) <š> or <ž>
 - a nasal plus <r>
 - at the beginning of a word, an empty onset is allowed.
- a rime, from one of:
 - a vowel with no coda
 - a short vowel plus a voiceless obstruent or a continuant
 - a long vowel plus a voiceless obstruent that does not geminate the onset of the following syllable
 - a long vowel plus any voiced obstruent
 - a long vowel plus a continuant
 - a diphthong (with no coda)

1.3 | Allophony

The following allophonic rules are listed:

Table 1.3: The allophonic rules of Ďraǵýl Rase. See table 1.4 for the legend.

Input	Output	Context
Ob1<+v>	Ob1<-v>	Ob2<-v> ♦
Ob1<-v>	Ob1<-v +a>	Ob2<-v> ♦
Ob1<-v>	Ob1<+v>	Ob2<+v> ♦
V1<+l> Ob1<-v> Ob1<+v>	V1<-l> Ob1<-v +gem>	
V1<+l> C1<+nas>	V1<+l +nas>	
Ob1<+v>	Ø	V1<+l> ♦
/t̪.l/	[t̪:]	
/t̪.s/	[t̪:]	
/s.t̪/	[t̪:]	
/t/	[t]	
/d̪ʒ/	[d̪ʒ]	
/d̪/	[n]	

Note that /n/ does *not* assimilate to [ŋ] before a velar consonant.

1.4 | Stress

A word has one stressed syllable. The natural location of the stressed syllable is determined by the following rules:

Table 1.4: Legend for table 1.3.

Symbol	Meaning
C	consonant
V	vowel
Ob	obstruent
v	voicing
l	long
nas	nasal consonant or vowel
gem	gemination
+	feature present
-	feature absent
∅	nothing
◆	location of input relative to other elements in context

- If there is a long vowel or a diphthong in the last three syllables, then the stress falls on one of them, in the order 2nd-to-last → 3rd-to-last → last.
- Otherwise, the stress falls on the second-to-last syllable.

Stress will be indicated in this grammar. If it falls on its natural location, then it is not marked. Otherwise, long syllables that are forced unstressed will be written with macra, and short syllables that are forced stressed will be written with acutes.

If there is no other way to use diacritics to indicate that a diphthong is unstressed (i. e. the stressed syllable is a long vowel), then a dot can be placed above the dominant vowel of the diphthong to force it to be unstressed, giving the letters <á ê ì ó ù ý>.

Hyphens may separate parts of words. In that case, only the last part will be counted toward translating between the romanisation and the actual location of stress.

See table 1.5 for examples.

Table 1.5: Examples of stress locations.

Orthography	Location of stress (# from last)
resa	2
nâki	2
zanál	1
nākil	1
panā	2
munuma	2
tôrenu	3
kejhátu	2
nekēkemew	1
panâ-kay	1
renekjúkâl	1

Some affixes might cause a stress to shift. Such affixes are marked with one of the symbols on Table 1.6.

Table 1.6: Symbols used to show stress shifting.

Symbol	Meaning
≥	Shift stress one syllable forward
▷	Shift stress to second-to-last syllable
►	Shift stress to last syllable
±	Keep stress on same syllable

1.5 | Vowel raising

Vowel raising is an important part of Ďrahyľ Rase’s grammar.

Vowels are split into two groups: *front* and *back*.

- Front vowels are ⟨a⟩, ⟨e⟩ and ⟨i⟩.
- Back vowels are ⟨o⟩, ⟨u⟩ and ⟨y⟩ (which, funnily enough, is actually front!).

These vowels redirect as such:

Table 1.7: Vowel raising rules.

Old	New
a	e
e	i
i	i
o	u
u	y
y	y

Long vowels are raised similarly. In diphthongs, only the dominant vowel is raised. This might cause the diphthong to decay to a long vowel.

1.6 | Notes about appending

Sometimes, appending two strings together will result in edge cases. Suppose we want to append X and Y (e. g. because either one of them is an affix or X-Y will be a zero-marked genitive construction).

- If Y has no initial consonant, then X-Y will result in a non-initial syllable without any onset. To resolve this, Y is given an onset of ⟨h⟩: ⟨vil⟩ + ⟨atu⟩ = ⟨vilhatu⟩.
- If X ends with a consonant and Y begins with the same consonant, then X-Y will have two of the same consonant in a row.
 - If this consonant is a voiceless plosive, then this sequence is treated as a geminate: ⟨atek⟩ + ⟨▷-kane⟩ = ⟨atekkane⟩.
 - If this consonant is ⟨s⟩, then the double consonant is changed to ⟨st⟩: ⟨itos⟩ + ⟨saj⟩ = ⟨itostaj⟩.
 - Otherwise, the sequence becomes a single consonant: ⟨bakar⟩ + ⟨≥-rul⟩ = ⟨bakarul⟩.
 - Note that ⟨t⟩ and ⟨ť⟩ are considered distinct, as are ⟨d⟩ and ⟨n⟩: ⟨lakan⟩ + ⟨≥-do⟩ = ⟨lakando⟩ [la'kan:Λ], not *⟨lakano⟩ or *⟨lakado⟩.

1.7 | Nasél Tēkel Piva

Ďrahýl Rase is written in *Nasél Tēkel Piva* (lit. New Sun Glyphs), a native script that uses dedicated glyphs for consonants and long vowels, plus diacritics for short vowels. It does not mark stress.

Table 1.8: Consonant and long vowels in NTP.

NTP	Rom	Name	NTP	Rom	Name
ε	p	mon-pama-vunu	ω	ñ	ġenu-hjula
ɥ	t	meša-pama-vunu	ɸ	d	medro
ɣ	k	kolo-pama-vunu	ɱ	b	heke
ɸ	s	lakan-pama-kêš	ɮ	z	vane-nâhe
ɛ̃	f	lakan-nimur-kêš	y	z	kêš-dunew
ɮ	n	sunuh-pama-kêš	ɣ	ġ	hrênu
ɜ	m	sunuh-nimur-kêš	β	đ	kekên
c	h	pelu-pulu	ð	t	kasu
ɜ	h	ġenu-pulu			
o	h	runa	ɜ	â	â
6	r	matuk	ɜ	ê	ê
ɮ	s	pelu-halde	ɜ	î	î
ɮ	l	ġenu-halde	ɜ	ô	ô
ɮ	v	mako	ɜ	û	û
ɸ	g	pelu-hjula	ɜ	ÿ	ÿ

The short vowels <a e i> are expressed with their own diacritics. <o u y> use the same main diacritics as <a e i>, respectively, but add a *kisyltew* (backing mark). <ɛ̃ 6 ɸ ɣ β ð> receive the main diacritic below the consonant glyph (and the *kisyltew* above). Other consonants and all long vowels receive the main diacritic above (and the *kisyltew* below).

Table 1.9: Short vowels in NTP.

Ø	a	e	i	o	u	y
ɮ	tã	tẽ	tĩ	tõ	tũ	tỹ
ɸ	gã	gẽ	gĩ	gõ	gũ	gỹ

<ɛ̃ ɛ̃> have special forms of the *kisyltew*: <ɛ̃̃ = po>; <ɛ̃̃̃ = fo>.

Diphthongs with the semivowel occurring first are written with the vowel diacritic corresponding to the semivowel placed on the consonant before the diphthong, followed by the glyph for the long vowel corresponding to the dominant vowel; e. g. <ɣ̃̃̃ = kja>.

Diphthongs with the semivowel occurring second are written with the glyph for the long vowel corresponding to the dominant vowel, modified by the vowel diacritic corresponding to the semivowel; e. g. <ɣ̃̃̃̃ = kaj>.

As seen in Table 1.12, names receive an overline.

1.8 | Hacm

Ďrahýl Rase can also be written in hacm. The orthography does not mark stress.

2 | Syntax

In this chapter, we look at the structure of the whole sentence.

2.1 | Basic word order

Đrahýl Rase requires the verb to come at the end of a sentence; hence, they are called <hrînu> (knots; sg. <hrênu>).

There is a subtle difference in which argument of the verb comes first. Both of the following sentences have the same meaning, but differ in which argument they emphasise:

Tôkus hânu ponelke.

cat-ERG dog bite-3ANM-PROG

The cat is biting the dog. (focuses on the cat, who is doing the biting)

Hânu tôkus ponelke.

dog cat-ERG bite-3ANM-PROG

The dog is being bitten by the cat. (focuses on the dog, to whom the biting is done)

In addition to syntactic emphasis, arguments of a verb may receive morphological emphasis, which is even stronger.

2.2 | Descriptors

Descriptors, which modify nouns, consist of genitives, numerals, relative clauses, locatives and directionals, although instances of the latter two categories might be modifying a verb instead. They come *before* the noun they modify.

Let us define the following properties for descriptors:

- A *restrictive* descriptor narrows the set of objects that the antecedent refers to. A *nonrestrictive* descriptor merely provides supplementary information. This distinction is shown in relative clauses using <►-kâl> and <►-kâs>, respectively, but for genitives, it must be inferred via word order.
- An *objective* descriptor names a property that can be agreed on by any two observers. A *subjective* descriptor names a property that two observers might disagree on.

Ex: colour is objective, but beauty is subjective

- An *engineered* descriptor describes a property that the antecedent is engineered to bear. A *natural* descriptor is the opposite.
Ex: size of a cultivated crop is engineered, but size of a wild plant is natural

Note that some of the properties above are dependent on the antecedent of a descriptor as well as the descriptor itself.

The descriptors of a noun appear in the order described by table 2.1.

Table 2.1: Order of descriptors, with the earliest at the top.

#	Category
1	Relative clauses
2	Nonrestrictive genitives
3	Restrictive subjective genitives
4	Locatives and directionals
5	Numerals
6	Restrictive objective engineered genitives
7	Restrictive objective natural genitives
8	Genitives that act as determiners

2.3 | Adverbials

Adverbials include true adverbs, adverbial forms of nouns, locatives and directionals. They can occur anywhere before the verb they modify, although true adverbs are more likely than other adverbials to appear at the very beginning of a clause.

2.4 | Locatives and directionals

Locatives and directionals that modify nouns occur before the nouns they modify. Those that modify verbs can occur anywhere before the verb they modify. However, they most often occur immediately before the verb and, if present, its negation particle.

2.5 | Appositives

The noun being clarified comes first, followed by the clarification.

2.6 | Interjections and vocatives

Interjections and vocatives occur at the very beginning of a sentence.

3 | Nouns

Nouns (<hivu>; sg. <hevu>; lit. *ropes*) are declined for case and number.

3.1 | Number

The main distinction lies between singular and plural. The singular form is unmarked. The plural form of a noun is created from the singular form by raising the high vowel.

In the absolutive case, a distinction is also made between dual and plural. The dual form of a noun is created by appending <-t> to the singular (decaying a final diphthong into a long vowel if necessary). If the singular form already ends with a consonant, <≥-te> is appended instead.

Table 3.1: Some nouns and their dual and plural forms.

Singular	Dual	Plural	Gloss
rase	raset	rese	language
plety	pletyt	plity	parent
itos	itoste	itos	riding animal
kolo	kolot	kulo	ground, place, floor
nupo	nupot	nypo	boat
tynda	tyndat	tynda	squirrel
tôrenu	tôrenut	tûrenu	palace
sydasaŷ	sydasât	sydaseŷ	book
ej	êt	î	I (non-elite)

3.2 | Case

There are eleven cases in Ďraħýl Rase:

3.2.1 | Absolutive

The absolutive form of a noun is the unmarked form of a noun. Nouns with this case can function as the subject of an intransitive verb, the direct object of a transitive verb or the recipient of a ditransitive verb.

3.2.2 | Ergative

Nouns in the ergative form can function as the subject of a transitive or ditransitive verb. The ergative form is derived from the absolutive form by:

- appending <-s> after a short vowel
- appending <-z> after a long vowel
- appending <-z> after a diphthong and decaying it to a long vowel
- appending <-ti> after <-s>
- appending <-di> after <-z>
- appending <-si> after any other voiceless consonant
- appending <-zi> after any other voiced consonant

3.2.3 | Accusative

Nouns in the accusative form can function as the direct object of an antipassive transitive verb, or as direct objects in certain verbs. The accusative form is derived from the absolutive form by:

- appending <-n> after a vowel
- appending <-n> after a diphthong and decaying it to a long vowel
- appending <-en> after a consonant

3.2.4 | Genitive

Nouns in the genitive case can modify other nouns to indicate possession or description. It is formed from the absolutive by:

- replacing the rime of the final syllable with <►-êl> if it is any of <-ew>, <-ej>, <-eý> or <-ê>
- but the genitive of <ej> (I, non-elite) is <ejlí>
- otherwise:
 - appending <≥-l> after a vowel if the stress is not on the final syllable
 - appending <≥-li> after a consonant, or if the stress is on the final syllable

Sometimes, a genitive might syntactically modify a verb with a causative. In that case, it semantically modifies the dislocated patient of the causative:

Atúl fetatosorakamađutro!
 person-GEN sing-1-2SG-story-CAUS-IMP
 Make me sing the person's story!

3.2.5 | Adverbial

Nouns in the adverbial case can modify verbs to act as adverbs. It is formed like the genitive, but using <r> instead of <l>. In other words, it is formed by:

- replacing the rime of the final syllable with <►-êr> if it is any of <-ew>, <-ej>, <-eÿ> or <-ê>
- but the adverbial of <ej> (I, non-elite) is <ejrî>
- otherwise:
 - appending <≥-r> after a vowel if the stress is not on the final syllable
 - appending <≥-ri> after a consonant, or if the stress is on the final syllable

3.2.6 | Locative

Nouns in the locative signify the location or time of an object or action. The locative case, when used on the name of a language, means “in a language”. They are formed from the absolutive with the suffix <≥-ma>.

Some nouns can be in the locative implicitly (without any marking). These include <šuna> (time, occurrence), <sepu> (occurrence) and <kôlo> (here).

3.2.7 | Directional

Nouns in the directional case indicate that an (object moved / action happened) (toward a place / until some time), and they are formed with the suffix <≥-me>.

3.2.8 | Causal

Nouns in the causal case indicate that an action happened because of something, and they are formed with the suffix <▷-kane>.

Final causal case (e. g. *went for the book; broken into pieces*) can be disambiguated by the particle <ta> after the noun.

3.2.9 | Benefactive

This case indicates an action done on behalf of something. It is formed from the suffix <▷-sane>.

3.2.10 | Comitative

This case indicates an action done in company with something or someone. It is formed from the suffix <▷-nylu>.

3.2.11 | Instrumental

This case indicates an action done with something (as a tool). It can also indicate the theme of a ditransitive verb. It is formed from the suffix <≥-rul>.

3.3 | Zero-marked genitive

An alternative construction for the genitive exists. If X and Y are both nouns, then X-Y is equivalent to X-GEN Y. However, this zero-marking construction is more limited compared to the full genitive; outside of literary uses, it is limited to the cases when:

- X is a quantifier such as <heli> (all), <mej> (what, which?), <kolo> (ground, many, much, this) or <manu> (part, some)
- X is an ordinal – e. g. <troma-nehatu> (first boy)
- Y is a relational noun
- Y is <kay> (group, collection) – e. g. <nâki-kay> (tree + group = grove)
- Y is a time expression such as <mane> (day) – e. g. <lykoj-mane> (next + day = tomorrow)
- Y is <sepu> (occurrence) – e. g. <sel-sepu> (once)
- Y is the name of a mathematical function
- the expression is the name of a plant or animal – e. g. <mojru-nâki> (apple tree)
- the expression is the name of a colour – e. g. <hina-suhor> (sea blue)
- in noun-verb-er compounds – e. g. <tasavo-vuleplū> (drum-hitter = drummer)
- in some fixed expressions such as <manenure> (day + middle = noon) or <tomu-forme> (domesticated animal + field = pasture)

As always, consult section 1.6.

3.4 | Coaspects

Coaspects apply before case but after number, and they can be stacked:

- Additional (also A, even A): <≥-tu>
- Exclusive (only A): <≥-(k, g, ħ, ġ, ñ)a> depending on the place of articulation and voicing of the onset of the previous syllable
- Superlative (the most A): <≥-do>
- Completive (all of A): <≥-tšek>
- Emphatic: <►-ħraw>

Technically, any verbal aspect can be applied on nouns, but those outside the list above are rare.

3.5 | Prefixes

- Diminutive: <ki->
- Augmentative: <to->
- Excessive: <dû->
- Feminine: <se->
- Masculine: <ne->
- False: <vil->
- Demonstrative prefixes:
 - <h̃ana-> this
 - <r̃ina-> that
 - <d̃ana-> yonder
 - <h̃ê-> other

3.6 | Appositive

In an appositive phrase, the base word (*not* the clarification) receives the suffix <±vek>, after all other affixes:

Ďrahy̋l Rasémavek Ďrahy̋n-Ny̋rlí rase ĥada etu t̃yrelke.

Ďrahy̋n-GEN language-LOC-APPOSITIVE Ďrahy̋n-land-GEN language 12⁶ human\PL speak\PL-3ANM-PROG

Ďrahy̋l Rase, the language of Ďrahy̋n-Ny̋r, is spoken by (about) 3,000,000 people.

3.7 | Relational nouns

Ďrahy̋l Rase lacks adpositions or cases specialised for concepts such as “outside” or “through”, but it can still express such concepts through *relational* nouns, which describe spatial or temporal relations. Relational nouns often use the zero-marked genitive.

Table 3.2: Some examples of relational noun use.

Phrase	Components	Translation
<i>ñaki-mojmé</i>	tree + away + directional	away from the tree
<i>h̃anamane-mojmé</i>	today + away + directional	from today on
<i>taga-nēmá</i>	box + inside + locative	inside the box
<i>forme-ĥajmé</i>	field + span + directional	through the field
<i>kelinka-nurema</i>	huts + middle + locative	amongst the huts
<i>ťak-šluvisko-heselár</i>	three + square root + latch + adverbial	in terms of $\sqrt{3}$
<i>pahñunew-pasár</i>	killing + intent + adverbial	with the intent to kill
<i>sűynut-t̃sakér</i>	dusk + despite + adverbial	despite the dusk

3.8 | Polarity

The negative of a noun is expressed with a particle <kêl> before the noun. Hence, for instance, <înylu> means *with us*, and <kêl înylu> means *without us*.

3.9 | Pronouns

Pronouns are separated by person and class (see table 3.3). The pronouns are given in Table 3.4.

Table 3.3: The pronoun classes of Ďrahýl Rase.

Class	Things that fall under this class
Divine	Deities
Human elite	Scholars, members of the military
Human non-elite	All other sentient beings
Non-human animate	Live animals and parts thereof
Inanimate	All other objects

Table 3.4: The pronouns of Ďrahýl Rase.

Class \ Person	1st	2nd	3rd
Divine	ervo	nime	
Elite	naba	revu	ħranu
Non-elite	ej	suý	ane
Animate			nej
Inanimate			vas

The dual and plural forms of pronouns are derived regularly.

The dual and plural forms of first-person pronouns are exclusive. To convey the inclusive first-person plural, a first-person and second-person pronoun are used together.

Note that the first-person plural pronouns are exclusive. Inclusive pronouns are expressed using the conjunction of two pronouns: <î suý> = *we and you*.

3.9.1 | Genitive pronouns

There are suppletive forms of genitive pronouns (table 3.5), but they are somewhat archaic. It is more common to derive them regularly from their absolutive forms.

Table 3.5: Genitive pronouns.

Class \ Person	1st	2nd	3rd
Divine	erul	nîl	
Elite	nabál	rêl	ħranúl
Non-elite	êl	sûl	anél
Animate			nêl
Inanimate			val

4 | Verbs

Verbs (<hrînu>; sg. <hrênu>; lit. *knots*) are conjugated for the person and number of both the ergative and the absolutive arguments, an optional causative, evidentiality, sense, zero or more aspects and tense. Only the person and number of the absolutive argument is obligatory.

4.1 | Verb structure

Figure 4.1: The structure of a conjugated finite form of a verb.

Note that the only optional affix dependent on another optional affix is the dislocated patient of the causative, which depends on the causative marker.

Figure 4.2: The structure of an infinitive form of a verb.

4.2 | The infinitive form of a verb

The infinitive form of a verb ends in <-ek>. Additionally, the stress does not fall on the last syllable.

4.3 | Absolutive argument marking in finite forms

Conjugating for the absolutive argument involves adding an ending for person and, for plural patients, changing the stem of the verb by raising the high syllable (e. g. <zane> to <zene>). Dual forms receive a special suffix.

For verb conjugation, the inanimate class in table 3.3 is placed into its own group, and all other classes are combined into an animate class. This distinction is made only in the third person.

Table 4.1: Conjugation of <zane> (to move).

	Singular	Dual	Plural
1st	zana	zanat	zena
2nd	zanu	zanut	zenu
3rd anim.	zanel	zaneš	zenel
3rd inanim.	zane	zanes	zene
0th	zano		
relative	zani		

The zeroeth-person marking is used for verbs that have no absolutive argument:

Table 4.2: Comparison between the presence of ABS and the absence.

Explicit ABS	Implicit ABS	No ABS
Ĥjamárzi <i>nerku</i> rine. bird-ERG seed\PL eat\PL-3 <i>The bird eats the seeds.</i>	Ĥjamárzi rine. bird-ERG eat\PL-3 <i>The bird eats them.</i>	Ĥjamárzi <i>reno</i> . bird-ERG eat-0 <i>The bird eats.</i>

4.4 | Ergative argument marking

This suffix is required only if the ergative argument is not explicitly mentioned elsewhere and it is not in the zeroeth person.

Table 4.3: Suffixes for the person and number of the ergative argument.

	Singular	Dual	Plural
1st	-to	-tot	-tu
2nd	-toso	-tosot	-tuso
3rd	-ta	-tat	-te
relative	-teba		
reflexive	-tame		

4.5 | Aspect

A verb in Ďrahýl Rase can also receive zero or more aspect affixes. These come after the evidentiality markers in finite verb forms and immediately before the stem in the infinitive.

Note that Ďrahýl Rase's *aspects* range beyond the traditional sense of “aspect”; it also covers mood, modality, degree, tellicity and volition.

Table 4.4: Aspect markers for Ďrahýl Rase verbs.

Name	Affix	Meaning
Habitual	-mo	Indicates an action performed as a habit.
Progressive	-ke	Indicates an action in progress.
Gnomic	-he	Indicates a general truth or aphorism.
Iterative	-sit	Indicates a repeated action at one point in time.
Inclinative ¹	-ñas	Indicates a tendency toward an action. Unlike the gnomic aspect, this does not suggest a universal. e. g. Ĥana-renus linka vineteñas. this-fox\PL-ERG house\PL scratch\PL-3-3.PL-TENDENCY These foxes tend to scratch houses.
Continuative	-kju	Indicates an action that is continuing to happen.
Momentane	-śu	Indicates an action that happens once or is short-lived.
Occasional ♦	-vir	Indicates an action that sometimes happens.
Temporary	-žir	Indicates a temporary state.
Inceptive	-ma	Indicates an action that is starting.
Cessative	-de, -du	Indicates an action that is ending. The exact suffix must agree with the vowel group of the previous syllable.

Name	Affix	Meaning
Repetitive	-ne	Indicates that an action happened in the past and is happening again.
Deontic Potential	-ġe	Indicates an action that is able to happen.
Deontic Necessitative	-ġan	Indicates an action that must or should happen.
Epistemic Potential	-fe	Indicates an action that is inferred to be able to happen.
Epistemic Probable	-he	Indicates an action that is inferred to be likely to happen.
Epistemic Necessitative	-van	Indicates an action that is inferred to necessarily happen.
Attempt	-da	Indicates an attempted action.
Defective	-kla	Indicates an action that almost happens.
Completive	-tšek	Indicates an action that is done to completion: <i>ħraletšekra</i> burn-3-COMPLETIVE-PAST <i>It burnt away completely.</i>
Telic	-vlo	Indicates a successful action (“managed to”).
Ineffective	-tšalu	Indicates that an action is ineffective in meeting some goal (“no use”).
Indifferent	-nelu	Indicates that an action is unnecessary in meeting some goal (“doesn’t matter”).
Diminutive	-ki	Indicates an action happening to a smaller degree. When combined with the imperative <-tro>, the verb is taken as a recommendation rather than a command.
Excessive	-dû	Indicates an action that happens to an excessive degree (“too much”).
Additional	-tu	Indicates an action happening in addition to another (“also”, “even”).
Exclusive	-(k, g, ħ, ġ, n)a	Indicates an action happening to the exclusion of others (“only”). The manner of articulation of initial consonant of the affix agrees with that of the onset of the previous syllable.
Superlative	-do	Indicates an action happening to the greatest extent (“the most”).
Discrete	-ni	Indicates one unit of action (e. g. “walk” → “step”).
Intentional	-pa	Indicates an action done on purpose.
Unintentional	-zy	Indicates an action done unintentionally.

Name	Affix	Meaning
Voluntary ♦	-sej	Indicates an action done willingly.
Involuntary ♦	-krej	Indicates an action done unwillingly.
Meritative ♦	-bûr	Indicates that an action is deserved.
Demeritative ♦	-kebûr	Indicates that an action is not deserved.
Improper	-zañ	Indicates that an action was done in an improper manner (“mis-”).
Actual ♦	-fsu	Indicates an actual state.
Imperative	-tro	Indicates a command to the second-person argument.
Hypothetical	-vluy	Acts as an if-clause. Mevu kêl sunuhevluy, mîny penetûta. rain NEG fall-3-HYPOT, flower\PL see\PL-3-1.PL-FUT If it doesn't rain, we will look at the flowers.
Conditional	-to	Indicates an action that depends on another condition (i. e. equivalent to our “would”).
Conflictive	-tsak	Acts as an although-clause.
Analogous	-mes	Indicates the antecedent of an analogy (i. e. equivalent to “for the same reason that”)
Emphatic	-hraw	Places emphasis on the verb.
Reciprocal	-ñe	Indicates that ABS and ERG (or in <i>n</i> -verbs, ACC and ABS) performed the action on each other.
Evident	-zu	Indicates an obvious action. Often condescending.
Antipassive ♦	-pah	Moves ERG to ABS, and ABS (if present) to ACC. May be used instead of the zeroeth-person ABS in order to avoid rhyming.
Exact	-kat	Indicates that the action is done or known exactly.
Approximate	-vis	Indicates that the action is done only approximately.
♦ indicates aspect limited to formal language		

Aspect affixes are ordered such that the leftmost affixes apply before those on the right. This order is honoured for both finite and non-finite forms of a verb.

Take the contrived example <tsagelteksavoduhanasitmanetufšutys>, starting before the first aspect affix:

<tsagelteksavoduhana> *I hear that they are making him ring the bell.*

<tsagelteksavoduhanasit> *I hear that they are making him ring the bell repetitively.*

<tsagelteksavoduhanasitma> *I hear that they are making him start ringing the bell repetitively.*

¹Thanks to marek for suggesting this name.

⟨tšagelteksavoðuhanasitmane⟩ *I hear that they are making him start ringing the bell repetitively again.*

⟨tšagelteksavoðuhanasitmanetu⟩ *I hear that they are also making him start ringing the bell repetitively again.*

⟨tšagelteksavoðuhanasitmanetufsu⟩ *I hear that, actually they are also making him start ringing the bell repetitively again.*

⟨tšagelteksavoðuhanasitmanetufsutys⟩ *I hear that, actually they are also about to make him start ringing the bell repetitively again.*

If ⟨-jC⟩ and ⟨-D⟩ were switched around, what is being repeated would be the act of *starting* to ring the bell.

4.6 | Tense

The tense marker, which comes at the end of a finite verb form, is one of the below:

- ⟨-∅⟩ present
- ⟨-ra⟩ past
- ⟨-ta⟩ future
- ⟨-rus⟩ immediate past
- ⟨-tys⟩ immediate future

4.7 | Causative

Verbs can be marked as a causative. As seen in figure 4.3, this moves one argument to another position: inside the verb.

Figure 4.3: The movement of arguments in a causative.

(If the base action has no ERG, then the causer assumes the ERG position and no further action is needed.)

The dislocated patient is incorporated in the verb, before the causative marker ⟨-du⟩. It is not necessary to mark the dislocated patient.

4.8 | Evidentiality

Evidentiality is optionally marked after the causative marker.

- ⟨-haka⟩ by direct evidence
- ⟨-hana⟩ by hearsay

- <-hame> inferential
- <-hamehe> inferential (self-evident)
- <-hala> by hope
- <-hale> by imagination
- <-hapa> by allegation
- <-hase> by desire

4.9 | Comparative

The comparative marker <gzo->, if present on a verb with no ERG, will cause the verb to compare the degree of the action between ERG and ABS. In other words, “X-ERG Y COMP-Z” means “X Zs more than Y”, akin to the *out-* prefix in English.

Hênu kretenelñas.
 dog\PL run\PL-3ANM-INCLINATIVE
Dogs tend to run.

Hênus tûku gžokretenelñas.
 dog\PL-ERG cat\PL COMP-run\PL-3ANM-INCLINATIVE
Dogs tend to run more than cats.

4.10 | Direction

A verb may have a directional marker before the comparative marker.

- <sun-> to a lower place
- <lak-> to a higher place
- <ren-> inwards
- <sak-> outwards, away
- <len-> with oneself

4.11 | Relation

A verb may have a relational marker before the directional marker.

- <nê-> inside (an unspecified place)
- <kun-> outside (...)
- <mu-> to the side of (...)
- <kej-> around (...)
- <saj-> on top of (...)

Note that relational markers do not act as applicatives.

4.12 | Stress

If the stress of the infinitive falls on the natural location, then it will for any conjugated form.

If it falls one syllable before it, then it will fall one syllable before the natural location for any conjugated form, unless the natural location is on the third-to-last syllable, in which case it falls on the third-to-last syllable.

If it falls one syllable after it, then it will fall one syllable after the natural location for any conjugated form, unless the natural location is on the last syllable, in which case it falls on the last syllable.

4.13 | Notes about formality

Formal language tends to revere brevity. As a result, when there is an option to either express something morphologically as opposed to periphrastically, it will prefer the former option.

On the other hand, informal language tends to use more periphrastic constructions, and avoid marking direction and relation morphologically. Compare the following examples:

Nêlumotokrejra.

REL_IN-read-0-1-INVOLUNTARY-PAST

Kolohevu vasa-nēmá lumotora.

unwillingly there-inside-LOC read-0-1-PAST

I unwillingly read inside.

Although the two sentences above express the same idea, the first sentence is more formal.

4.14 | Polarity

As with nouns, the negative of a verb is expressed with a particle <kêl> before the verb.

Similarly, tag questions are marked with the particle <têl>:

Munumár têl kotanurus.

slow-ADV TAG come-2-IMMEDIATE_PAST

You came late, right?

4.15 | N-verbs

N-verbs are a special class of verbs that, instead of taking ERG and ABS arguments, take ABS and ACC arguments. In the example below, <sinek> is an *n*-verb.

Daj-manema ane ralan sinelra.

previous-day-LOC PR.3.NONELITE sorrow-ACC feel-3ANM-PAST

Yesterday, she felt sorrow.

Other *n*-verbs include <rumek> (depend, rely on).

Some verbs can be used either as a regular verb or an *n*-verb, but carry different meanings depending on usage:

Table 4.5: Some verbs whose meanings depend on *n*-usage.

Verb	<i>N</i>	Non- <i>n</i>
panek	see	look at
takek	hear	listen to
rakek	touch accidentally	touch intentionally
mumek	hate because of some intrinsic quality of what is hated	hate for the sake of hating
ramek	break something that is in the way	break something, seeking out things to be broken

4.16 | Ditransitive verbs

Đraħýl Rase is a secundative language; in other words, in ditransitive verbs, the recipient is the absolutive argument of the verb. The theme is marked with the instrumental case.

Zanyś Ħarku zārerul ventelra.
 Zany-ERG Ħarku spoon-INSTR give-3ANM-PAST
 Zany gave Ħarku a spoon.²

Note that *<Zanyś Ħarkume zāre vemtera> is grammatically incorrect.

However, other verbs may act in a monotransitive or ditransitive manner. Thus, <Zanyś Ħarku zārerul betlelra> and <Zanyś Ħarkume zāre betlera> are both correct and mean “Zany sent Ħarku a spoon”.

4.17 | General comparatives and superlatives

The comparative prefix <gzo-> (mentioned in section 4.9) works only if the base sentence has no ergative argument and the subject of comparison is the absolutive argument. Alternatively, if the ergative argument is present and it is the subject of comparison, and there is no accusative argument, the verb can receive the antipassive aspect, demoting the ergative to the absolutive, but this method tends to be unusually formal.

The general approach is used only when an ergative argument is present in the base sentence or the subject of comparison is not the absolutive argument. This approach uses the relationals <hāle> and <kā> on the dominant and recessive subjects, respectively. These relationals are in turn declined for the case of the subject of comparison:

Pylus mîny-hāle setla-kā rinehe.
 fish\PL-ERG flower\PL-CMPDOM leaf\PL-CMPRESS eat\PL-3-GNOMIC
 Fish eat more flowers than leaves.

²If you're curious, <Zany> means *robin* and <Ħarku> means *seed*.

Zany-*hâles* Narku-kâz gedu rene.
 Zany-CMPDOM-ERG Narku-CMPRESS-ERG meat eat-3
 Zany eats more meat than Narku does.

Further difficulties arise from cases where the subject of comparison is the verb, or even complete clauses. In this case, the dominant verb receives the comparative prefix <gzo-> and the completive aspect marker <-tšek>, while the recessive verb receives the comparative prefix and the diminutive aspect <-ki>:

Mako varu-mulama gžopuluheltšek sydasej gžolymetaki.
 Mako lake-side-LOC COMP-catch_fish-3ANM-COMPLETIVE book\PL COMP-read\PL-3-3SG-DIM
 Mako fishes beside the lake more than he reads books.³

In any case, omitting either the dominant or the recessive subject of comparison is ungrammatical.

Superlatives follow a completely different strategy. In most cases, the subject of comparison receives the <-do> coaspect or aspect:

Zakıl tages hrasodo lene.
 west-GEN wind-ERG vigour-SUPER have-3
 The west wind is the strongest.

Nehetu-tûr Zany naneldora.
 MASC-person-out_of-ADV Zany work-3ANM-SUPER-PAST
 Of the men, Zany worked the most.

As in the second example, the relational <tuy> (adverbial: <tûr>) plus the adverbial case marks the basis of comparison.

Occasionally, multiple subjects of comparison might be marked:

Kay-tûr sujdos gireltosodo.
 group-out_of-ADV 2SG.NE-SUPER-ERG attract-3ANM-2SG-SUPER
 Out of the group, he is attracted to you the most.

This double marking suggests that there are two plausible subjects of comparison.

4.18 | Dependent clauses

4.18.1 | Relative clauses

A relative clause, or one that modifies a noun, is formed by appending <►-kâl> or <►-kaş> to the conjugated verb. Either the relative pronoun strategy (using verbal affixes or the pronoun <bâ>) or the gap strategy may be used to express the antecedent inside the clause. The relative pronoun strategy is the most common when the antecedent is the ABS of the clause or it would be otherwise unclear where it is. The gap strategy is the most common for non-ABS antecedents that are clear.

³<Mako> means *star*. Oddly enough, it's a masculine name.

Table 4.6: Examples of relative clause usage.

Role of ante. in RC	Example
ABS	kunemikekâl sazuha dance-RELPRO-PROG-rel monkey the monkey that is dancing (⟨kunemekekâl sazuha⟩ is also acceptable)
ERG	daj-manema hwonarakâl nehatu previous-day-LOC befriend-1-PAST-REL MASC-human the man who befriended me yesterday (⟨... hwonatebarakâl nehatu⟩ is also acceptable)
LOC	mîny flenekâl kinâhe flower\PL grow\PL-3-REL hill the hill where the flowers grow (⟨mîny bāma flenekâl kinâhe⟩ is also acceptable)
GEN	hānu teneldūkâl kisehatu dog bark-3ANM-EXCESSIVE-REL DIM-FEM-HUMAN the girl whose dog barks too much (⟨bāli hānu teneldūkâl kisehatu⟩ is also acceptable)
BENEFACTIVE	bāsane nanakâs rûma REL-BENEFACTIVE work-1-REL.NONRESTRICTIVE CHILD my child, whom I work for (⟨nanakâs rûma⟩ is somewhat acceptable but confusing)

⟨►-kâl⟩ is used for restrictive clauses, and ⟨►-kâs⟩ is used for nonrestrictive clauses:

hānu teneldūkâl kisehatu
dog bark-3ANM-EXCESSIVE-REL DIM-FEM-HUMAN
the girl whose dog barks too much

hānu teneldūkâs kisehatu
dog bark-3ANM-EXCESSIVE-REL.NONRESTRICTIVE DIM-FEM-HUMAN
the girl, whose dog barks too much

Furthermore, despite allophony rules, ⟨►-kâs⟩ is not pronounced [kâ:], but rather [kâ:ʔ].

4.18.2 | Content clauses

Content clauses are clauses that stand in place of nouns. They are formed by appending ⟨►-kaj⟩ to the conjugated form of a verb. The resulting clause can be declined as a noun, except that it is necessarily singular and its genitive form is ⟨►-kālī⟩.

Kejsa nînelmokâz klaśake.
subject\PL belittle\PL-3ANM-HABITUAL-CONT-ERG worry-1-PROG
That he belittles his subjects is worrying me.
or: I'm worried that he has a habit of belittling his subordinates.

4.18.3 | Quotatives

Some verbs accept an argument other than ABS, ERG or ACC. The *quotative* (QUOT) argument is used to show direct or indirect speech. To create a quotative, the particle <tes> is used.

“Tak pejson panara” tes tûrelra.
 “three butterfly\PL-ACC see-1-PAST” QUOT say-3ANM-PAST
He said, “I saw three butterflies.”

Len tynda peneltara tes tûrelra.
 four squirrel\PL see\PL-3ANM-3-PAST QUOT say-3ANM-PAST
She said that she looked at four squirrels.

Sometimes, it may be useful to pass non-quotative arguments where a quotative is expected (e. g. *I didn’t say anything*). In that case, the quotative relational noun <tene> (lit. word) plus the adverbial case is used:

Selko-tenér kël tûrara.
 anything-QUOT.RELATION-ADV NEG say-1-PAST
I didn’t say anything.⁴

4.18.4 | Sequence of tenses

An independent clause may have its tense marker (and possibly aspect markers) omitted if a clause later down the chain holds such markers:

Śaga nevr-ħajmá tanake, sevy paneto, vozas haldet syltesra.
 half two_hours-through-LOC walk-1-PROG, home see-3-1, mud-ERG leg-DU cover-3DU-PAST
I walked for an hour, looked at my house, mud covering my legs.

Note that <tanake> and <paneto> receive no tense marker because it is provided by <syltesra>.

Otherwise, tense is absolute among independent clauses:

Sepletys daj-manema sušara, nepletys lykoj-manema sušafa.
 FEM-parent-ERG previous-day-LOC visit-1-PAST, MASC-parent-ERG next-day-LOC visit-1-FUT
My mother visited me yesterday, and my father will visit me tomorrow.

If it wasn’t obvious from the other words, the word <sušafa> refers to the future in the absolute sense, rather than relative to when the event described by the first clause happened.

In a single independent clause with one or more dependent clauses, the clause that occurs first is absolute, and all other clauses are relative to their predecessors:

Daj-manema penarakâl rekko hyo kotanelta.
 previous-day-LOC see\PL-1-PAST-REL young_person now arrive-3ANM-FUT

⁴But note that this could also be expressed as <Selšun kël tûrara>.

The young man whom we saw yesterday has arrived now.

Here, <kotanelta> indicates that the arrival of the young man happened after the speakers saw him (<penarakâl>).

5 | Numerals

5.1 | Cardinal numerals

Đrahýl Rase uses a base-12 numbering system. The cardinal numerals from 0 – 12 are given below:

Table 5.1: The cardinal numerals from 0 – 12.

#	word
0	nâ
1	sel
2	mon
3	tak
4	len
5	bê
6	fû
7	zat
8	ko
9	rej
10	gym
11	hyk
12	vôn

Words for integers in the form $x \cdot 12$ for $2 \leq x < 12$ are expressed as $\langle x\text{-vôn} \rangle$ – e. g. $\langle \text{monvôn} \rangle = 24$; $\langle \text{rejevôn} \rangle = 108$.

Words for integers in the form $x \cdot 12 + y$ for $2 \leq x < 12$ and $1 \leq y < 12$ are expressed as $\langle x\text{-vôn-}y \rangle$, but with a few exceptions:

- Long vowels in y are shortened; e. g. $17 = 12 + 5$ is $\langle \text{vônbe} \rangle$, not $*\langle \text{vônbê} \rangle$
- $\langle \text{mon} \rangle$ (2) and $\langle \text{len} \rangle$ (4) swallow the $\langle n \rangle$ of $\langle \text{vôn} \rangle$; e. g. $62 = 5 \cdot 12 + 2$ is $\langle \text{bêvônmon} \rangle$, not $*\langle \text{bêvônmon} \rangle$
- $\langle \text{rej} \rangle$ (9) is shortened to $\langle \text{re} \rangle$ and swallows the $\langle n \rangle$ of $\langle \text{vôn} \rangle$; e. g. $33 = 2 \cdot 12 + 9$ is $\langle \text{monvôre} \rangle$, not $*\langle \text{monvônrej} \rangle$
- $\langle \text{ko} \rangle$ (8) and $\langle \text{gym} \rangle$ (10) change the $\langle n \rangle$ or $\langle \text{vôn} \rangle$ to $\langle \dot{n} \rangle$ (though in the standard dialect, this is only an orthographic change); e. g. $82 = 6 \cdot 12 + 10$ is $\langle \text{fûvôn\dot{n}gym} \rangle$, not $*\langle \text{fûvôngym} \rangle$

Words for integers less than 12^6 are expressed in the form

$$a \cdot 12^5 + b \cdot 12^4 + c \cdot 12^3 + d \cdot 12^2 + (x \cdot 12 + y)$$

where $(x \cdot 12 + y)$ is expressed using the rules above, and the remaining terms are expressed with the words:

Table 5.2: The cardinal powers of 12 up to 12^5 .

#	word
12^2	sanu
12^3	pôre
12^4	rakir
12^5	fegi

Words for integers that are 12^6 or greater are split into groups of six digits and use the following words for powers of 12^6 :

Table 5.3: The cardinal powers of 12^6

#	word
12^6	ħada
12^{12}	vaza
12^{18}	teħada
12^{24}	linħada
12^{30}	baħada
12^{36}	fuħada
12^{42}	zethada
12^{48}	kuħada
12^{54}	rîħada
12^{60}	ġymħada
12^{66}	hykhada
12^{72}	vûnħada

5.2 | Ordinal numerals

The ordinal numerals for *1st* and *2nd* are the suppletive forms <troma> and <iramu>, respectively. Most ordinals after *2nd* are expressed regularly with the suffix <-ru>.

Ordinals that end with the following roots are formed irregularly:

Table 5.4: Suppletive ordinals

final	ordinal form
sanu	sanru
pôre	pôru
rakir	rakiru

5.3 | Fractions

Most fractions of the form $1/n$ are formed by suffixing <-kul>. The exceptions are listed in the following two tables:

Table 5.5: Suppletive fractional forms

#	word
1/2	šaga
1/12	bžarit or vônkul
1/144	kaslo
1/12 ³	navam

Table 5.6: Suppletive fractional forms

ending root	fractional
rakir	rakirlo
fegi	fegilo
hada	hadalo
vaza	vazalo
tehada	tehadalo

Notes:

- Fractions of the form $1/(n \cdot 12)$, $1/(n \cdot 144)$ or $1/(n \cdot 12^3)$ (with $n \neq 1$) are formed regularly; e. g. $1/(3 \cdot 12^3)$ is <takpôrekul>, not *<taknavam>
- But this does not apply to table 5.6; e. g. $1/(11 \cdot 12^4)$ is <hykrakirlo>, not *<hykrakirkul>
- The fractional forms of higher powers of 12^6 are not suppletive; e. g. $1/(12^{30})$ is <baḥadakul>, not *<baḥadalo>
- The stress is shifted to the second-to-last syllable.

Fractions of the form x/y , where $x \neq 1$, are written as $x (1/y)$ s. For example, <tak kovōlinkul> means 3 (1/100)s, or 3/100 (note the pluralisation). Likewise, 2/99 would be written <mon kovōntakkulte>. In the ergative case, for instance, this would be written as <mon kovōntekkulzi>.

5.4 | Distributive numerals

These are formed by suffixing <-vin>, and carry a meaning similar to “each” or “at a time”.

Takvin tego linetat zanešra.
 three-DISTRIBUTIVE box\PL hold\PL-3-3.DU move-3.DU-PAST
 The two carried three boxes each.

Kasu-ḥajmé selvin nyvelra.

door-through-**DIR** one-**DISTRIBUTIVE** leave\PL-PAST
They left through the door one at a time.

5.5 | Collective numerals

These are formed by suffixing <►-kô>, and are equivalent to the English expression “between them”.

Ṭakkô tego linetat zanešra.
 three-**COLLECTIVE** box\PL hold\PL-3-3.DU move-3.DU-PAST
The two carried three boxes between them.

5.6 | Multipliers

Multipliers tell how many times one amount is relative to another. They are similar to the expression “x times as much as” or “x-fold”, and they act as descriptors or adverbials. They are formed by appending <±-fšal>.

Kajnes vōlenfšal atúl kajne keme.
 height-ERG twelve-four-**MULTIPLIER** human-GEN height equal-3
Its height is sixteen times the height of a human.
 or: *It is sixteen times as tall as a human.*

6 | Conjunctions

6.1 | Juxtaposition

Juxtaposition is used to join two elements with an “and”:

Nâkin / nâhen panara.
tree-ACC mountain-ACC see-1-PAST
I saw a tree and a mountain.

Kihatu klanel, unelra.
DIM-person be_lost-3ANM cry-3ANM-PAST
The child got lost and cried.

When written, nouns are joined with a slash (an interpunct <·> in NTP), and clauses with a comma (a broken pipe <|> in NTP).

When two predicates are joined, which of ERG, ABS or ACC occurs first in the first clause becomes the first empty argument of (ABS, ERG, ACC) in the second clause:

Hatus hânu rakel, kunemelra.
human-ERG dog touch-3ANM dance-3ANM-PAST
The person pet the dog and the person danced.

Hânu hatu rakel, kunemelra.
dog human-ERG touch-3ANM dance-3ANM-PAST
The person pet the dog and the dog danced.

Ñarkus lavatu neke, ej lušuhatakjusit.
Ñarku-ERG bread-ADDITIONAL dislike-3, PR.1 annoy-1-3-CONTINUATIVE-HABITUAL
Ñarku dislikes even bread, and she keeps annoying me.
(Here, ABS is occupied, so <Ñarku> takes ERG in the second clause.)

6.2 | <ka> and <gy>

<ka> (inclusive or) and <gy> (exclusive or) are explicit conjunctions between what they join, and they follow the same rules as juxtaposition.

When two or more of the three conjunctions occur in the same phrase, all three of these conjunctions have the same precedence level and are evaluated right to left.

Explicit grouping is possible using $\langle \text{re} \dots \text{zo} \rangle$.

Table 6.1: Examples showing evaluation order of conjunctions.

DR	Translation
A B C	A and B and C
A ka B ka C	A or B or C
A B ka C	A and (B or C)
A ka B C	A or (B and C)
A B ka C D	A and (B or (C and D))
re A B zo ka C D	(A and B) or (C and D)

6.3 | The sequential conjunction $\langle \text{ruk} \rangle$

Unlike simple juxtaposition, $\langle \text{ruk} \rangle$ implies a sequence:

Kihatu klanel ruk unelra.
 DIM-person be_lost-3ANM and.SEQ cry-3ANM-PAST
The child got lost and then cried.

6.4 | The simultaneous conjunction $\langle \text{mik} \rangle$

Similarly, $\langle \text{mik} \rangle$ implies that two actions happened in parallel:

Kihatu klanel mik unelra.
 DIM-person be_lost-3ANM and.SIMUL cry-3ANM-PAST
The child got lost while she cried.

7 | Adverbs

It is commonly said that there are no adverbs in Ďraĥýl Rase. This is not entirely true, but true adverbs are a closed class. They do not receive any inflection.

Table 7.1: Some adverbs in Ďraĥýl Rase.

Adverb	Meaning
huna	probably
mamane	forever
selsun	at all, ever, suddenly
rūnaĥâr	in a few seconds
turusti	anymore
laksun	then, if that is the case
laŋkašaŋka	a long time ago
naý	but, however
kolohevu	unwillingly
anasana	often

It is more common to use the adverbial case: <munuma> *slowness* → <munumár> *slowly*.

8 | Derivational rules

Derivational rules (<rilak>; sg. <relak>; lit. *paths*) are rules that form a related word from a root.

8.1 | Verb-to-verb rules

These, as the name suggests, convert a verb into a related verb. These are called <helahreniw> (sg. <helahrenew>; lit. *re-tying*) in Ďrahyíl Rase. These are not particularly common, given the rich inflectional morphology of verbs.

8.1.1 | Reversive

Example: <mepek> *learn* → <šlumepek> *forget*

Example: <helek> *cure* → <šluhelek> *infect* (“un-cure”)

Prefixing <šlu-> will change the meaning of an intransitive or transitive verb to its reverse.

8.1.2 | Repetitive

Example: <mepek> *learn* → <helamepek> *relearn*

Example: <hrenek> *tie* → <helahrenek> *retie*

Prefixing <hela-> will change the meaning of an intransitive or transitive verb X to mean “to X again”.

8.2 | Verb-to-noun rules

These convert a verb into a related noun. In Ďrahyíl Rase, they are called <šluhreniw> (sg. <šluhrenew>; lit. *untying*). A common method to learn these constructions is to use the dummy verb <bžebek> and its derivations to show its role.

8.2.1 | Agent noun

These are nouns describing an entity who performs an action. They are distinguished by the role of the agent in the action in question and the animacy of the agent.

Table 8.1: Agent derivations. These can substitute either the <-ek> infinitive affix or the <-kaj> content clause affix. The former substitution is shown first, followed by the latter. All of the affixes shift the stress to the second-to-last syllable.

Role \ Animacy	Animate	Inanimate
ERG	-eplū / -kaplū panek <i>look at</i> paneplū <i>guard</i>	-etanu / -ketanu sunuhek <i>fall, drop</i> mevu-sunuhetanu <i>rain machine</i>
ABS	-oplū / -kuplū benek <i>reside</i> benoplū <i>resident</i>	-otanu / -kotanu ħralek <i>burn, cook</i> ħralotanu <i>fuel</i>

Agent nouns can be compounded. An ERG-agent noun can be prepended with an ABS-argument, and vice-versa (though, as usual in compounding, only the second noun is declined):

mevu-sunuhetanu
rain-fall-AGENT.ERG.INANIMATE
rain-dropp-er or rain machine

nŷr-rimoplū
land-be_a_burden-AGENT.ABS.ANIMATE
someone who is a burden to the country or societal waste

Hence, the mnemonics are <Bžebeplūz bžebo> *A foo-er foos* and <Bžeboplūz bžebel> *A foo-ee is fooed*.

8.2.2 | Action noun

As usual, these are distinguished by role. In other words, there is a distinction between the act of being the ERG of a verb and the act of being the ABS.

Table 8.2: Action derivations. These are formed by substituting <-ek> with another affix.

Role	New affix
ERG	►-ew tšalek <i>fight</i> → tšalew <i>battle</i>
ABS	▷-esa panek <i>see</i> → panesa <i>appearance</i>

Note that the ABS and ACC arguments of *n*-verbs are treated as ERG and ABS in action nouns.

Hence, the mnemonics are <Bžebew: bžeboto> *Foing^{erg}: I foo* and <Bžebesa: bžeba> *Foing^{abs}: I am fooed*.

8.2.3 | Location noun

These are distinguished between natural and manmade locations.

Table 8.3: Location derivations. These are formed by substituting <-ek> or <-kaj> with another affix. All of the affixes shift the stress to the second-to-last syllable.

Location type	Affix
Natural	-ekolo / -kekolo rumek <i>hunt</i> → rumekolo <i>hunting grounds</i>
Manmade	-elenka / -kalenka renek <i>eat</i> → renelenka <i>restaurant</i>

Hence, the mnemonic is <Bžebelenkama binel bžibelpah> *In the foo-house, they reside and foo.*

8.2.4 | Temporal noun

Example: <mepek> *learn* → <mepešu> *schooltime*

These describe the time when an action happens. <-ek> is replaced with <▷-ešu>, and <-kaj> with <▷-kašu>.

Hence, the mnemonic is <Bžebešuma vledel bžibelpah> *At foo-time, they wait and foo.*

8.2.5 | Pattern noun

Example: <ħralek> *cook* → <ħralélaj> *recipe*

These describe a pattern or blueprint for an action. <-ek> is replaced with <▷-élaj>, and <-kaj> with <▷-kélaj>.

Hence, the mnemonic is <Ėz bžebélaj lume bžebo>¹ *I read the foo-book and foo.*

8.2.6 | Instrument noun

Example: <tanek> *go, walk* → <tanive> *a tool for walking* → <tanivél vunū> *walking-stick*

These describe an instrument used for an action. <-ek> is replaced with <▷-ive>, and <-kaj> with <▷-kajve>.

Hence, the mnemonic is <Bžebiverul bžebo> *They foo with the foo-tool.*

8.2.7 | Derivative noun

The derivative noun is used to describe a product made from an action. Again, there is a distinction between natural and manmade derivatives:

Table 8.4: Derivative derivations. These are formed by substituting <-ek> or <-kaj> with another affix. All of the affixes shift the stress to the second-to-last syllable.

Derivative type	Affix
Natural	-eñej / -keñej ponek <i>bite</i> → poneñej <i>result of biting (e. g. bite marks)</i>
Manmade	-eklane / -keklane ħralek <i>cook</i> → ħraleklane <i>cooked food</i>

¹using whatever first-person pronoun is appropriate

Hence, the mnemonic is $\langle \text{Bžebo bžebeklane srane} \rangle$ *They foo and make foo-product.*

8.2.8 | Tendency noun

Example: $\langle \text{horek} \rangle$ *laugh* \rightarrow $\langle \text{horura} \rangle$ *tendency to laugh* \rightarrow $\langle \text{horurál atu} \rangle$ *a person who tends to laugh*

These create a noun that means “tendency to do X”, which in turn is almost always used in the genitive or as the ABS of $\langle \text{lenek} \rangle$ *to have*.

$\langle -\text{ek} \rangle$ is replaced with $\langle \triangleright -\text{ura} \rangle$, and $\langle -\text{kaj} \rangle$ with $\langle \triangleright -\text{kura} \rangle$.

Hence, the mnemonic is $\langle \text{Bžeburál atu bžeboñas} \rangle$ *A person with the tendency to foo tends to foo.*

8.2.9 | Craft noun

Example: $\langle \text{gunek} \rangle$ *experiment, torture* \rightarrow $\langle \text{gunyw} \rangle$ *science*

These create a noun that means “the art of doing X”. $\langle -\text{ek} \rangle$ is replaced with $\langle \blacktriangleright -\text{yw} \rangle$, and $\langle -\text{kaj} \rangle$ with $\langle \blacktriangleright -\text{nyw} \rangle$.

Hence, the mnemonic is $\langle \text{Bžebyw varnekâl etu anasana bžebo} \rangle$ *Those who enjoy the art of fooing often foo.*

8.3 | Noun-to-noun rules

These convert a noun into a related noun. In *Ďraňýl Rase*, they are called $\langle \text{lakan-ěj} \rangle$ (sg. $\langle \text{lakan-ĥaj} \rangle$; lit. *spanning over or crossing*).

Due to the number of such rules and their straightforwardness, we express them in a table.

Table 8.5: Noun-to-noun rules.

Name	Affix	Description
Collection	$\blacktriangleright -\text{kaý}$	A collection of the noun. Ex. $\langle \text{nâki} \rangle$ <i>tree</i> \rightarrow $\langle \text{nâkikaý} \rangle$ <i>forest</i>
Bounty	$\triangleright -\text{tanu}$	Full of; supplied with; having much of. Ex. $\langle \text{vuýra} \rangle$ <i>mold</i> \rightarrow $\langle \text{vuýratanu} \rangle$ <i>moldiness</i>
Negative	kê-	Obvious. Ex. $\langle \text{denutanu} \rangle$ <i>finite</i> \rightarrow $\langle \text{kêdenutanu} \rangle$ <i>infinite</i>
Reversive	šlu-	The reverse action. Ex. $\langle \text{visko} \rangle$ <i>squaring</i> \rightarrow $\langle \text{šluvisko} \rangle$ <i>square root</i>
Archetype	$\geq -\text{ko}$	An entity of the quality. Ex. $\langle \text{kensu} \rangle$ <i>redness</i> \rightarrow $\langle \text{kensuko} \rangle$ <i>red thing</i>
Natural derivative	$\blacktriangleright -\text{nej}$	Obvious. Ex. $\langle \text{nâku} \rangle$ <i>seed</i> \rightarrow $\langle \text{nâkunej} \rangle$ <i>young plant</i>
Manmade derivative	$\triangleright -\text{plane}$	Obvious. Ex. $\langle \text{nâki} \rangle$ <i>tree</i> \rightarrow $\langle \text{nâkiplane} \rangle$ <i>wood</i>
Partial	$\blacktriangleright -\text{mân}$	A part of something. Ex. $\langle \text{nâki} \rangle$ <i>tree</i> \rightarrow $\langle \text{nâkimân} \rangle$ <i>branch</i>
Friend	$\blacktriangleright -\text{tûn}$	A friend or proponent of something. Ex. $\langle \text{šluklanew} \rangle$ <i>correcting misleading information</i> \rightarrow $\langle \text{šluklanewtûn} \rangle$ <i>proponent of correcting misleading information</i>

Name	Affix	Description
Possessor	▷-kâdu	One who possesses something. Ex. <nȳma> <i>wisdom</i> → <nȳmakâdu> <i>wise person</i>
Container	≥-sew	A container for or a typical home of something. Ex. <kêš> <i>arrow</i> → <kêšsew> <i>quiver</i> Ex. <hawma> <i>spider</i> → <hawmasew> <i>spider web</i>
Study	▷-relu	The study of something. Ex. <reka> <i>number</i> → <rekarelu> <i>mathematics</i>
Craft	►-nyw	The art or craft of something. Ex. <rakama> <i>story</i> → <rakamanyw> <i>literature (field of study)</i>
Change	≥-há	The act of gaining some quality. Ex. <revet> <i>pale, white</i> → <revetha> <i>lightening</i>
Reflexive	ñe-	A quality pertaining to oneself or each other. Ex. <kēkemew> <i>difference</i> → <ñekēkemew> <i>diversity</i>
Agent	≥-hat	One who does. Ex. <rekarelu> <i>mathematics</i> → <rekareluhat> <i>mathematician</i>

In general, <▷-relu> suggests a more objective field of study, and <►-nyw> a more subjective one. Interestingly, *science* is translated as <ḡunyw>, which uses a derivation analogous to the latter.

8.4 | Noun-to-verb rules

These are called <hrenílj> (sg. <hrenélaj>; lit. *tying recipe*).

8.4.1 | Becoming

Example: <kensu> *red* → <kensunek> *reden*

This is a simple suffix <≥-nek> and produces an intransitive verb. If the stress somehow falls on the last syllable with the shift, it instead falls on the second-to-last: <hajnek> instead of *<hajnék>.

8.4.2 | Measure

Example: <kaku> *year* → <kakunvek> *be x years old*

Example: <ñetra> *unit of distance equivalent to shoulder-to-fingertip distance (~0.75 cm)* → <ñetranvek> *be x ñitra tall / long*

Example: <farep> *unit of mass (~1.5 kg)* → <faremvek> *weigh x ferep*

A longer example:

Vômon pavranveto.

twelve-two pavra-MEASURE-3-1

I am fourteen pevra tall. (1 pavra = 1/6 ñetra)

The measure rule takes a unit of measure and outputs a transitive verb meaning “ERG measures ABS units”. It is formed by:

- Changing the coda to the nasal at the same place of articulation (but <h> and <h> change to <n>, and <t> and <d> to <n>). If there is no coda, append an <n>.
- Appending <▷-vek>.

9 | Semantics

This chapter is meant to be a guide on how to use certain words, and may help you translate text to or from Ďraǵýl Rase.

9.1 | Predicative possession

Uninterestingly, predicative (alienable) possession is expressed with the verb <lenek> *have, hold, possess*. (This verb is also used to assign a quality to the noun.)

Bûn êz *lene*.
cup I.NONELITE-ERG *have-3*
I have a cup.

Inalienable predicative possession uses the relational <dura> *glue* and the verb <atek> *exist*.

Mon takit-durár *ata*.
two ear-DU-glue-ADV *exist-1*
I exist with two ears.
or: *I have two ears.*

Predicative association (e. g. *I have a dog*) uses an expression that is translated to *live with*:

Hânunylu *bena*.
dog-COM *reside-1*
I live with a dog.
or: *I have a dog.*

9.2 | “To be”

The English verb “to be” has no direct translation in Ďraǵýl Rase because it has several uses:

- to express identity
- to express membership or subthood

- to express location
- to express a property
- to express definition
- to express existence

Each of these meanings is covered by a different verb in Ďraħýl Rase.

9.2.1 | Identity

Identity is expressed with the verb <kemek> *equal*:

Vašâz Tasara keme.
 Vašâý-ERG Tasara equal-3
*[The city of] Vašâý is Tasara.*¹

9.2.2 | Membership

Membership is expressed with the verb <asek> *include, contain*. Note that the ERG argument is always plural and refers to the superset:

Mâra etus asel.
 Mâra human\PL-ERG contain-3ANM
[The set of] humans contain[s] Mâra.
 or: *Mâra is a human.*

Ĥrêne nêkis ese.
 birch\PL tree\PL-ERG contain\PL-3
Birches are trees.

Note that juxtaposition of two nouns declined in the ergative case produce unexpected results:

Hênus / tûkus asel.
 dog\PL-ERG cat\PL-ERG contain-3ANM
It is a dog or a cat. (literally *[The set of] dogs and cats contains it.*)

In order to produce the intended result, the clause must be repeated:

Hênus asel, tûkus asel.
 dog\PL-ERG contain-3ANM cat\PL-ERG contain-3ANM
It is both a dog and a cat.

Note that <asek> is also used for the conventional sense of *including* or *containing*:

Tagas laki ase.
 box-ERG salt contain-3
The box contains salt.

¹Vašâý and Tasara are the Ďraħýl Rase and Kavinan names for the same city, respectively.

9.2.3 | Location

Location is expressed with the verb <benek> *be at, reside, stand, live*:

Suylí lenkama bena.
 PR.2.NONELITE-GEN house-LOC be_at-1
I am at your house.

9.2.4 | Property

<lenek> *have, possess* is used for qualities:

Zekkus revet lene.
 rabbit-ERG white have-3
The rabbit is white.

9.2.5 | Definition

<hšenek> *ERG is defined as ABS* is used:

Pavras fūkul ñetra hšene.
 pavra-ERG six-FRACTION ñetra defined_as-3
A pavra is one-sixth of a ñetra.

9.2.6 | Existence

This uses <atek> *exist*.

Vanrakajkáne ata.
 ponder-1-CONTENT-CAUS exist-1
I think; therefore, I am.

9.3 | “Good” and “bad”

There are no direct translations of *good* or *bad* in Drahýl Rase. One must specify by which metric.

10 | Miscellanea

This chapter covers often-neglected topics that are too small for their own chapters.

10.1 | Units of measure

10.1.1 | Time

The following table shows the most common units of time:

Table 10.1: Units of time.

Name	Definition	Approximation
kaku (= <i>year</i>)	365.25 mene, 8 or 9 diku	1 year
deku	44 or 45 mene	
nusa	6 mene	
mane (= <i>day</i>)		1 day
nevur	1/12 mane	2 hours
tarnu	1/72 nevur	5/3 minutes (100 seconds)
pšule	1/108 tarnu	0.925 seconds

The *kaku* starts on the first day of the first *deku* on or after the 12th *mane* before the spring equinox.

→ Names of diku

Table 10.2: Names of the *diku*.

Name	Length	Origin
zandek	44	<zany> <i>robin</i>
kazdek	45	<kasla> <i>lily</i>
têdek	44	<têke> <i>sun</i>
mevdek	45	<mevu> <i>rain</i>
sundek	44	<sunuhek> <i>fall down</i>
šidek	45	<šiki> <i>dust, powder</i>
guldek	44	<guli> <i>ice</i>
mordek	45	<moru> <i>black</i>
hraldek	44	<hrale> <i>fire</i>

Mordek is an intercalary *deku* that appears only in *keku* with nine *diku*.

→ Names of the mene of the nusa

Starting from the first day of work, these are:

- pakuy-mane
- sanlu-mane
- kônre-mane
- grefu-mane
- zekku-mane
- Idisa-mane

Idisa-mane is commonly considered a day of rest. The first *mane* of the *kaku* is set such that the last *mane* of the *kaku* is *Idisa-mane*.

10.1.2 | Length

The following table shows the most common units of length:

Table 10.3: Units of length.

Name	Definition	Approximation
swana	2520 ñitra	1.89 km
ñetra	shoulder-to-fingertip distance	75.0 cm
pavra	1/6 ñetra	12.5 cm
nûko	1/6 pavra	2.08 cm
hjali	1/15 pavra	8.33 mm

10.1.3 | Mass

The following table shows the most common units of mass:

Table 10.4: Units of mass.

Name	Definition	Approximation
farep		1.56 kg
vune	1/24 farep	65 g

10.2 | Abbreviations

Abbreviations of phrases with multiple words take the body of the initial syllable of each word, shortening long vowels and removing the glides from diphthongs: <Nasél Tèkel Piva> shortens to <Natepi>, for instance.

10.3 | Personal names

Most citizens of Ìraḥyn-Nýr have a familiar given-surname combination, in that order.

- The given name is usually a noun standing for a concrete object, usually of a natural object or phenomenon.
- The surname is usually a place name or an adjectival noun. Inherited from the mother if born during the day, and from the father if born at night.

All parts of a name are inflected for case individually.

10.4 | Colour

The traditional colour terms are listed in table 10.5.

Over time, the words for “red” and “green” were reanalysed as the compounds “magenta-yellow” and “cyan-yellow”, yielding <uksu> *magenta* and <reh> *cyan*. This also yielded one of the words for colour: <dan>. These terms, along with the bound

Table 10.5: Traditional colour terms in Ďraħýl Rase.

Term	Translation
revet	white
moru	black
kensu	red
danen	yellow
rehen	green
suhor	blue
ďalfo	grey

Table 10.6: Some terms derived from <uksu> and <reh>.

Term	Translation	Derivation
uksu	magenta	basickish
reh	cyan	basickish
leksubên	scarlet	len uksu + bê en
enuksun	orange	en + uksu + en
enbênreh	chartreuse	en + bê en + reh
enmorehen	green-yellow	en + mon rehen
morehselen	aquamarine	mon reh + sel en
resuhor	sky blue	reh + suhor
rehuksureh	purple	reh + uksu + reh
ťaksumoreh	violet	ťak uksu + mon reh
uksurehuksu	cerise	uksu + reh + uksu

root <en>, are combined to create terms for high-chroma colours such as those from table 10.6.

Quite unsurprisingly, terms for tints are formed with the prefix <revet-> and those for shades are formed with the prefix <moru->. Before a vowel or with the colour terms in table 10.5, <mor-> is used for shades instead. Terms for tones are prefixed with <ďalfo-> or <rem->.

There are also a few colour terms that do not fall in the above categories (table 10.7).

Table 10.7: Miscellaneous colour terms.

Term	Translation	Derivation
endalfo	warm grey	en + ďalfo
neškemoru	brown	neške (<i>dirt</i>) + moru

11 | Example Texts

11.1 | Kive (original works)

11.1.1 | Mağama rŷna

A | The Ďraħýl Rase lexicon

An entry looks like this:

marda *n* castle, fortress, stronghold, conviction, firm

From left to right:

1. The entry – the Ďraħýl Rase term listed.
2. The part of speech of the corresponding entry:
 - *n* – a noun or pronoun
 - *v* – a verb
 - *vn* – an *n*-verb
 - *vn?* – a verb that can be used as either an *n*-verb or a non-*n*-verb. In this case, both usages are clarified in the notes.
 - *v2* – a verb that can be used as either a monotransitive verb or a ditransitive verb
 - *v2x* – a verb that is always used as a ditransitive
 - *adv* – a true adverb
3. The definition – the gloss for the corresponding entry.
 - (a) (A) – the ergative argument of the verb.
 - (b) (P) – the absolutive argument of the verb.
 - (c) (QUOT) – the quotative argument of the verb.
4. If applicable, any special grammatical or semantic notes for this term.
5. Optionally, examples of usage.

ej *n* I

| p
