### 0.1 Introduction

#### 0.1.1 | Synopsis

Necarasso Cryssesa (lit. *forest language*) is a language conceived by Uruwi in 2013. It was intended to have an elvish aesthetic.

The language originally had SVO, head-initial order. VE<sup>2</sup>ENCS (Vletmata erse Enefa eas Necarasso Cryssesa) added the dual number and made one verb irregular.

 $VE^3$  ENCS changed the methods of forming vowel-terminating duals as well as elaborating on punctuation use.

 $VE^4ENCS$  was the last "old Necarasso Cryssesa" and, among other things, completely changed pluralisation, introduced short forms of numerals and created passive forms of verbs.

Due to dissatisfaction with the morphosyntactic similarity to Spanish, 5 (do) vletmata, published on 26 December 2014, overhauled the language:

- Due to influence from Japanese, the  $\{s,t\}\to\{J\!\!\!/,tJ\!\!\!\!/\}$   $(\blacklozenge V_1\{i,i:,j\})$  rule was added.
- Word order is now SOV and head-final in most cases.
- Articles and gender were removed.
- Case was added.
- Tense is now reflected in conjugation instead of using an auxiliary verb.
- The short numerals are now the only valid numerals.

6 (mja) vletmata, published on 19 February 2016, expanded the changes:

• Phonotactics were clarified.

6 CONTENTS

- Incorrect linguistic terminology was resolved.
- Obviate pronouns were added.
- A section on transitivity was added.
- New constructs (NCS's term for peripheral cases) were added.
- Uses of causatives and comparatives were clarified.
- A distinction between *erasing* and *h-forming* morphologies was made.
- Units of measure were specified.

This document edits 6 vletmata to meet my new standards for conlang grammars.

## 0.2 | Original introduction

Welcome to the *new* complete grammar of Necarasso Cryssesa! Note that this is not a full tutorial and assumes that you have the wordlist with you. If you don't have it, then a download link should have been at your reach.

This document replaces the  $VE^4ENCS$  you loved (or in my case, loved less); between its release and now, the grammar of Necarasso Cryssesa received major reforms (and perhaps it should be called Cryssesa Necarasso according to the new syntactic rules). It is compiled from the still-relevant parts of  $VE^4ENCS$  and the proposed edits in Google Docs, plus more out of thin air (most of Chapter 4, for instance). As a result, you'll probably find the new NCS more terse and beautiful. (Or maybe you're a masochist and preferred the Spanish-like grammar of the former language better. 公平であるよ。)

And finally, if you want to learn the language, you not only need to study this document but also the wordlist (ncsvocab.ods). The old part of it was recently batch-converted with a Scala program (before I started to dive into the gory details of Perl 6). I'll be really hard on you. 公平であるよ。

#### 0.2.1 | Too-frequently asked questions

- 1. Is this language difficult? 1. If you don't find it that way, then either I or you are doing something very, very wrong.
- 2. Why should I learn this language? Maybe you offered to learn it in return for having me learn yours. Or you just want to blend in with the locals.
- 3. Am I welcome to learn even if you didn't ask me to? 1.
- 4. What does 1 mean? Seems as if you'd need to continue.
- 5. Why did you change the grammar? Because the old one was too much like that of Spanish, my Spanish teacher was mean, and I became obsessed with Japan.
- 6. Why did you become obsessed with Japan? Shooting little girls. And they shoot back too.

- 7. What the ファック?!! It's not as bad as it seems.
- 8. Can you still write NCS in kana? ぺるてねす。
- 9. This font is ugly! Well, I could use only the DejaVu fonts because of IPA, and DejaVu Sans Mono had spacing problems. It's either this or DejaVu Serif.
- 10. No, the one you use to write Japanese! It looks like a yukkuri, smells like a yukkuri, and feels like a yukkuri. Take it easy.
- 11. You're too funny! This isn't a question, but I'll respond anyway. Deal with it.
- 12. You're going to fill this page with your humor! Relax, there is another page. I should really stop, though.
- 13. What's your favorite programming language? I have many. TI-Basic (the 83+ version, not the crappy 89 version), Scala, C, and recently I started with Haskell.
- 14. BLAH BLAH BLAH BLARRG Y U NO LUV PYTHON?!!!!! Mainly whitespace. Screw you, Haskell, for doing this too when I just wanted to make an ed clone.
- 15. What's your favorite game for shooting little girls? 東方妖々夢 ~ Perfect Cherry Blossom.
- 16. What's a *pertingent apudessive construct*? It describes something (a vertical surface) with something else on it.

#### 0.2.2 | Changes in the 6th edition

- Clarify phonotactics
- Use correct linguistic terminology
- Add section on obviate pronouns
- · Use proper glosses
- Add section on transitivity
- Clarify combinations of numerical roots
- Add a few new constructs
- Elaborate on causatives and comparatives
- Clarify distinction between erasing and h-forming morphologies
- New section on units of measure

8 CONTENTS

## 1 | Phonology and orthography

Necarasso Cryssesa uses the following phonemes:

Table 1.1: The consonants of Necarasso Cryssesa.

	Bilabial	Dental	Alveolar	Post-alveolar	Velar	Dento-velar
Nasal	m		n			
Plosive	рb		t d	(č /tʃ/)	c /k/ g	
Fricative	f v /φ β/	ss /θ/	S	(š /ʃ/)	h /x/	css /xθ/
Lateral fricative		11 /4/				
Approximant			r /ɹ/			
Lateral approximant			1			

Table 1.2: The vowels of Necarasso Cryssesa.

Short	Long
a	(a:)
e	(ε:)
y /i/	i /i:/
О	(5:)

Note that all unvoiced consonants are aspirated and there are no diphthongs. In addition, any consonant may be palatalised. This is shown with  $\langle j \rangle$  after the consonant; for instance,  $\langle cj \rangle = /k^j / . /x^j /$  is realised as [j], so it is written as  $\langle j \rangle$ .

## 1.1 | Phonotactics

The basic form for a word is usually  $C_0(NC) * N_t$ , where:

- C is a consonant
- $C_0$  is a consonant other than  $/\theta \nmid x/$  (but  $/x\theta/$  is allowed), or one of  $/p_a \beta_a \beta l \varphi_a \varphi l t l t u d l d u d u k u g u g l k f/ (<math>\langle cv \rangle = /kf/$ )

- N is an approximant, followed by a vowel, then another approximant
- $N_t$  is one of /a e i: o as es i:s os is an en on in  $^j$ a  $^j$ o  $^j$ as  $^j$ os  $^j$ an  $^j$ on a $\theta$  e $\theta$  i $\theta$  ea $\theta$  el il ad id/
- there are no sequences of palatalised consonants followed by /i/ or /i:/.

### 1.2 | Allophony

(\* means that this change is reflected in spelling.)

```
 \begin{array}{l} * \left\{ s,t \right\} \rightarrow \left\{ \!\! \int,t \!\! \int \right\} \quad (\blacklozenge V_1 \{i,i:\}) \\ * \left\{ s^j,t^j, \textbf{1}^j \right\} \rightarrow \left\{ \!\! \int,t \!\! \int,j \right\} \\ * \left\{ ka,ko \right\} \rightarrow \left\{ k^ja,ke \right\} \quad (\Box \blacklozenge) \text{ (except in words containing $$\langle$ car-$\rangle$ out)} \\ \left\{ a,e,o \right\} \rightarrow \left\{ a:,\epsilon:,\sigma: \right\} \quad (\blacklozenge \Sigma_1 \{V_1,\mathcal{C}_1 \{\textbf{1}, \frac{1}{7}, \textbf{1}, \frac{1}{7} \}, \Box \}) \end{array}
```

### 1.3 | Erasing vs. h-forming

Some inflections and compounds might result in two vowels adjacent to each other. *H-forming* morphologies deal with the problem of two identical adjacent vowels by infixing <-h-> between them. They do not exhibit special behaviour on two different adjacent vowels.

*Unconditional erasing* morphologies merge two adjacent vowels, resulting in only the first vowel remaining. *Conditional erasing* morphologies merge only identical adjacent vowels.

### 1.4 | Punctuation

The period, the question mark, the exclamation mark and the semicolon are used as usual. Guillemets are used as quotes, and foreign words are marked with an asterisk.

## 2 Syntax

Necarasso Cryssesa requires verbs (present or implied) to come before the subject, object or any obliques in a sentence. In addition, the subject usually comes before the direct object, making the word order SOV in most cases.

A descriptor precedes its antecedent, unless:

- it is part of a language name and the antecedent is <necarasso>, or
- it is a cardinal (as opposed to ordinal) numeral

in which case the descriptor follows the antecedent. Names are presented with the surname first, and the given name second.

## 2.1 | Questions

In formal speech, questions are prefixed with  $\langle \tilde{s}an \rangle$ . In questions that provide an option,  $\langle geto \rangle$  other precedes the second:

Šan eran cynsso dešyre geto ydyr martas? Q PR.1PL.OBL with go-DISJV other here wait-2SG Will you go with us or wait here?

## 3 Nouns

A noun can adopt any ending that does not end with a  $\langle -d \rangle$ . All nouns are declined in three numbers, as follows:

Singular	Dual	Plural
All with a	-ar	-0
-el	-or	-jon
-e	-ir	-i
-erss	-yr	-yss
All others with e	-yr	$e \rightarrow y$
-0	-yn	-an
-or	-osor	el -el
All others with o	-or	-el
All with i/y	-er	-es
Drop palatalisation?	Yes	No, unless ending rules
		require dropping

Table 3.1: Number inflections in Necarasso Cryssesa.

Note that dual number applies to any noun that refers to two entities, whether paired or unpaired.

Number declensions are conditionally erasing. For instance, <ernei> army is pluralised to <ernes>.

Nouns are also declined for nominative or oblique case. The nominative case is unmarked, and the oblique is formed by changing the final consonant to  $\langle -n \rangle$  (or adding it if the form ends in a vowel) on a noun already inflected for number. Nominative cases are used for the subject of a sentence and with *eas* when referring to possession, as well as in an object of the copula.

## 3.1 | Personal pronouns

Personal pronouns have irregular numerical declensions, but cases are accounted in the same method as in other nouns.

14 CHAPTER 3. NOUNS

Table 3.2: Examples of declensions in Necarasso Cryssesa.

ruote 3.2. Examples of deciciosions in recurasso cryssesa.						
Singular	Dual	Plural	Definition			
vercesa	vercesar	verceso	grain, fleck			
nesmeja	nesmerar	nesmejo	star			
rečyrcar	rečyrcar	rečyrco	flower			
mortos	mortor	mortel	hand			
arpelja	arpelar	arpeljo	stream			
cerel	ceror	cerion	sunset			
csserys	csserer	csseres	door			
nerdo	nerdyn	nerdan	base, foundation, floor			
creten	crečyr	crečyn	wave			
naria	nariar	nario	chin			

Table 3.3: Personal pronouns in Necarasso Cryssesa.

	Singular	Dual	Plural
1st	e I	ento	eras we
2nd	eo you	eoro	eos you
3rd	os he, she, it	oson	oros they

In addition, when a two different third-person subjects are mentioned in a context, the first to be mentioned now uses <ela> and the second uses <emta>. If more than two are mentioned, then the following additional pronouns are used:

Table 3.4: Obviate pronouns in Necarasso Cryssesa.

2	enros
3	ton
4	senca
5	redo
6	remja
7	relen
8	refe
	etc.

<ela> and <emta> are uninflected, the other three suppletive obviates are inflected as nouns, and the remainder of the obviate pronouns are inflected as such:

• Nominative: redo, ryrdo, rydo

• Oblique: rendo, ryndo, ryndo

Personal pronouns can be dropped if they are obvious from context, even when they would otherwise be objects of postpositions or such.

#### 3.1.1 | Reflexive and reciprocal pronouns

These are <nemesa> and <cypra>, respectively:

Menssen nysos ferna nemesan varmeneata. mirror-OBL through child self-OBL observe-PAST-3SG The child looked at himself through the mirror.

They can also appear in noun phrases where the possessor is identical to the subject of the sentence:

Emtenva nemesa eas loran šynčyta. yesterday self GEN hair-OBL cut-PAST-3SG Yesterday she cut her own hair.

### 3.2 | Indefinite pronouns

Indefinite pronouns are not inflected, and have the number of what they describe (e.g. (šynta) (everyone) is plural, not singular as in English).

### 3.3 | Compounding

Nouns can be compounded together, with the modifying noun first and the head noun second. Likewise, adjectives can compound with nouns, but this type of compounding is rarely productive outside of names. Both noun-to-noun and adjective-to-noun compounding are unconditionally erasing.

#### 3.3.1 | Noun-verb agent compounding

This process is remarkably similar to the English noun-verb-er pattern. See section 11.2 for details.

#### 3.3.2 | Noun-verb action compounding

As indicated in 11.2, the verb ending can be replaced with  $\langle -ata \rangle$  in order to convert it to a noun indicating the action itself. A noun can also be prepended, as in  $\langle ener-syntata \rangle$  tree-cutting.

Note that noun-verb compounding falls short of full noun incorporation, because nouns cannot be compounded with finite verb forms.

16 CHAPTER 3. NOUNS

Table 3.5: Indefinite pronouns.

Adjective	Thing	Person	Place	Time	Reason
vyn what NOM	ven	venor	yvin	ysan	asčyr

defte	defteraso
rese	reseraso

## 4 Verbs

Verbs in Necarasso Cryssesa are inflected for person and number, as well as four *moods*:

- Indicative denotes a certain statement (e. g. It snowed yesterday. I gave him the book.).
- Subjunctive denotes an uncertain statement (e.g. *I'm not sure whether it will snow tomorrow. I'll give him the book if he* comes to school.).
- Imperative denotes a command, request, need, or desire (e. g. Please give me the book. You want her to help you. It's important to eat every day.).
- Interrogative denotes a question (e. g. Which book did you receive?). Unless provided separately, it is inflected identically as the indicative. In informal speech, the indicative is often used instead.

Verbs are inflected in five paradigms (asagi; sg. asage; literally pattern):

Table 4.1: Verb conjugations in Necarasso Cryssesa.

0 asage. Ends in ⟨-ad⟩ but not ⟨-ead⟩.					
	⟨cynrad⟩ open				
Indicative	Singular	Dual	Plural

Interrogative	Singular	Dual	Plural
1	e ce	ento cen	eras ceass
2	eo ces	eoro cesen	eos cellar
3	os cella	oson cellan	oros gon

## 4.1 | Polarity

In order to form the negative of a non-imperative form of a verb, the particle  $\langle ci \rangle$  is used. In the imperative form,  $\langle c' - \rangle$  is prefixed to verbs beginning with  $\langle e - \rangle$  and  $\langle cer - \rangle$  otherwise.

#### 4.2 Tense

The only tense distinctions are past and nonpast (present or future). Tense is regarded as a special construction, rather than a conjugation; in order to form the past infinitive, replace  $\langle -ad \rangle$  with  $\langle -a\check{c}yd \rangle$  and  $\langle -yd \rangle$  with  $\langle -y\check{c}yd \rangle$ .

## 4.3 | Serialisation

To form modal and serial expressions (an English example would be *can come* or *come walking*), the infinitive of the verb that would come second in English occurs first, with the final  $\langle d \rangle$  replaced with  $\langle v \rangle$ , with the other verb appended:

20 CHAPTER 4. VERBS

Vyncyvpertena. come-ser-able\_to-1sG I can come.

In a similar construction, a noun can be glued after a verb to form a compound:

necsavesada sit-ser-room sitting room

#### 4.4 Voice

In the present tense, passive voice is formed by replacing  $\langle -ad \rangle$  with  $\langle -erad \rangle$  (h-forming), and  $\langle -yd \rangle$  with  $\langle -eryd \rangle$  (conditionally erasing).

The past passive, which is not a verb but rather an adjective, is formed by replacing  $\langle -d \rangle$  with  $\langle -go \rangle$ .

### 4.5 | Rules for determining which mood to use

- 1. If it is certain that an action is or is not performed, then use the indicative.
- 2. If a question is being asked, then use the interrogative.
- 3. If a command, request, need, or desire is expressed, then use the imperative.
- 4. The hypothesis clause of  $\langle so \rangle$  if always uses the subjunctive.
- 5. An emotional reaction to an action that happened (e. g. I feel happy that your parents are inviting me to dinner) uses the indicative for that action.
- 6. If doubt or other lack of certainty is expressed or implied, then use the subjunctive.

### 4.6 | Irregular imperatives

The second-person singular imperative of  $\langle marčyd \rangle$  wait is  $\langle mares \rangle$  and that of  $\langle cjarečyd \rangle$  leave alone is  $\langle cjares \rangle$ .

#### 4.7 | Causatives

Necarasso distinguishes between:

- direct causation: the action was caused by a direct act of the subject (e. g. by force)
- indirect causation: the action was caused by an indirect act (e. g. by speech or some chain of events)

4.8. TRANSITIVITY 21

Direct causatives, which are commonly used to convert intransitive verbs into transitive verbs, are formed by the prefix do. Indirect causatives are formed as follows:

- $\langle nyd \rangle \rightarrow \langle teryd \rangle$
- $\langle ryd \rangle \rightarrow \langle ceryd \rangle$
- $\langle -d \rangle \rightarrow \langle -deryd \rangle$

Then the causer assumes the subject position, and the subject of the base action becomes the direct object. If the base action already has a direct object, then it will be the second direct object in the sentence.

Examples:

Cynyn docaršyta. vase-OBL DC-fall-PAST-3SG He dropped the vase.

ersaden eferan nyrsen ylmyraderyta. master servant-OBL water-OBL bring-IC-PAST-3SG The master had the servant bring water.

Gentrydyr ersaden renecyn renmane rylssyderyta.
study-ANIM\_ACTOR master advice-INSTR Renme-INESSIVE rest-IC-PAST-3SG
The student advised the instructor to take a vacation at Renme.

It is also useful to note that indirect causatives usually involve sentient beings.

### 4.8 Transitivity

Verbs are often either intransitive or transitive. Some can play both roles depending on whether an object is specified, but verbs cannot take on different valences depending on an active / stative distinction:

Menea. see-1sg I see.

Enen menea. tree-OBL see-1SG I see the tree.

Genar nassala. snow melt-3sG The snow melts. 22 CHAPTER 4. VERBS

Senar arcyn donassala. fire ice-OBL DC-melt-3sG The fire melts the ice.

## 4.9 | The copula

The only copula has the infinitive form  $\langle ryd \rangle$ , but in the nonpast tense, is conjugated only for mood.

Table 4.2: Conjugations of ⟨ryd⟩.

Mood	Form
Indicative	re
Subjunctive	ryse
Imperative	ryte
Interrogative	ren

The copula is optional in the indicative and the interrogative moods.

## 4.10 | The null verb

The null verb,  $\langle nyd \rangle$ , is a catch-all noun-to-verb converter, much like the Japanese  $\not$  3, and is conjugated regularly:

Šan ver renel na? Q what.OBL advice NULL-3SG What do they advise?

## 5 Adjectives

Adjectives are distinct from nouns because they are not declined for case and cannot appear as an object of a postposition; they are also distinct from verbs because they do not inflect for person or tense. In addition, some adjectives do not inflect at all.

Most adjectives are inflected for number in the same style as nouns in order to agree with their heads; however, they do not inflect for case. Some adjectives, such as those corresponding to indefinite pronouns, are uninflected.

ir zinainipies et aageestres in tresatass			
	Adjective	Definition	
	enela	soft	
	trenso	loose	
	mesto	sweet	
	ecssyrvo	sharo, thin	
	Exma (uninflacted)	o11	

Table 5.1: Examples of adjectives in Necarasso Cryssesa.

#### 5.1 Adverbs

Adverbs are formed from adjectives by replacing the ending with <-amyn>.

#### 5.2 | Comparatives and superlatives

Comparatives are formed by using the adjective or adverb  $\langle$ dedeno $\rangle$  *more*:  $\langle$ acrynala $\rangle$  = dark  $\rightarrow$   $\langle$ dedeno acrynala $\rangle$  = darker. Similar expressions can be created using  $\langle$ regrys $\rangle$  *less*.

Superlatives employ the word \( \)iss\( \) (formerly a definite article) before the comparative, optionally dropping \( \)dedeno\( \).

#### 5.2.1 | Comparison against other objects

In order to form the equivalent of *more* | *less* X *than* Y, the  $\langle$ than  $Y \rangle$  part appears in the beginning as  $\langle Y re \rangle$ :

emta re dedeno anassa that-N than more tall taller than that one

In order to form the equivalent of as X as Y, the  $\langle$ as  $Y \rangle$  part appears in the beginning as  $\langle Y |$  ress $\rangle$ , with an optional  $\langle$ celsamyn $\rangle$  (equally) before that phrase:

(celsamyn) emta ress anassa (equal-ADV) that-N like tall as tall as that one

## 6 | Postpositions

Postpositions follow what they encapsulate. The nominal phrase encapsulated is in the oblique case, unless the phrase in question indicates possession.

ceren ar dešyd house-OBLL to go-INF to go to a house

Table 6.1: Some postpositions in Necarasso Cryssesa.

PP	Def.
es	in, during
yl	on (a horizontal surface)
čyl	on (a vertical surface)
car	outside of
aseni	above (also a noun)
desor	below (also a noun)
cynsso	with
cyrcyn	without
ar	to
se	off of
eas	of, from
nas	for, toward, on behalf of, in exchange for
nysos	for, through

## 7 Conjunctions

## 7.1 | Nominal and adjectival conjunctions

Only X would be inflected; Y's case would be encoded in the presence or absence of the final  $\langle -n \rangle$ .

Table 7.1: Nominal and adjectival conjunctions.

X and Y	X Y:ce(n)
X or Y (incl.)	X Y:te(n)
X or Y (excl.)	X Y:re(n)

Conjoining adverbs involves changing the ending on only the first item.

## 7.2 | Verbal (predicate) conjunctions

This set of conjunctions is used when:

- there are two predicates with the same subject
- the second clause of a compound sentence is a command; in this case, the first clauses usually provides the subject explicitly

The third-person singular form of a  $\langle -yd \rangle$  verb is shown below, but the conjugation of Y stays constant, even through different infinitive endings.

Table 7.2: Predicate conjunctions.

•	iore 7.2. i reareace conjunector		
	X and Y	X:yme Y:a	
	X or Y (incl.)	X:yge Y:a	
	X or Y (excl.)	X:yre Y:a	

## 7.3 | Clausal conjunctions

These join entire clauses (subject + predicate).

Table 7.3: Clausal conjunctions.

X and Y	ner X ner Y
X or Y (incl.)	ce X ce Y
X or Y (excl.)	ce X cssar Y

## 7.4 | Additive clausal conjunctions

These conjunctive constructs occur at the beginning of a sentence and extend the previous one.

Table 7.4: Additive clausal conjunctions.

		J
and Y		ša Y
or Y (in	ıcl.)	cen Y
or Y (ex	xcl.)	cssen Y

### 7.5 | The let-alone pattern

The equivalent of English's "let alone" is expressed with a compound sentence with its second clause using <cjares>, the suppletive imperative form of <cjaryd> (to let alone). This pattern is not limited to negative actions:

Arcaneše ceren yndaryme ci crysseredas mytrayd cjares. winter-TEMPORAL house-OBL leave-CONJV NEG forest-PROLATIVE run-INF let\_alone-IMP

She won't leave the house during the winter, let alone run through the forest.

Mjoran ervenčyme yrenyn nyd cjares. wolf-PL-OBL approach-CONJV caressing NULL-INF let\_alone-IMP He not only approaches the wolves but caresses them.

## 8 | Numerals

Numerals are expressed in hexadecimal and are uninflected.

Decimal	Hexadecimal	Short
0	0	ces
1	1	vyl
2	2	sen
3	3	en
4	4	tar
5	5	do
6	6	mja
7	7	len
8	8	fe
9	9	ny (i)
10	A	re
11	В	pyn
12	С	va
13	D	as
14	E	go
15	F	jar
16	10	srad
17	11	sradvyl
18	12	sradsen
19	13	sraden
20	14	srantar
32	20	sensrad
48	30	ensrad
64	40	tarsrad
80	50	dosrad
96	60	mjasrad
256	100	flen
512	200	seflen
4096	1000	sradflen
4352	1100	sradvylflen
		•

Decimal	Hexadecimal	Short
8192	2000	sensradflen
65536	1 0000	dara
	10 0000	sradara
	100 0000	flendara
	1000 0000	sradflendara
	1 0000 0000	seta
	1 0000 0000 0000	yryso
	1 0000 0000 0000 0000	enan
	$10^{14}$	gelten
	$10^{18}$	sallar
	10 <sup>1C</sup>	rynar
	$10^{20}$	asar
	10 <sup>40</sup>	vessen
1/2	1/2	meana (or)
1/3	1/3	endo
1/4	1/4	tardo
1/5	1/5	nodo
1/6	1/6	mjado
2/3	2/3	endosen
3/4	3/4	tardoen

Roots are combined with the most significant digit coming first:

```
as-srad-pyn-flen-re-srad-jar 13-16-256-10-16-15 (13\cdot 16+11)\cdot 256+(10\cdot 16+15)=56239
```

(with hyphens added for clarity). Powers of  $16^4$  up to and including  $16^3$ 2 have their own words; those from  $16^3$ 6 to  $16^6$ 0 are made as a product of  $16^3$ 2 and another power (e. g.  $\langle gelten-asar \rangle = 16^(32+20)$ ), and those from  $16^6$ 8 to  $16^1$ 24 as  $16^6$ 4 and another power.

Numerals are always h-forming.

⟨srad⟩ sixteen is changed to ⟨sran⟩ at the end of a word, in order to satisfy phonotactic rules.

To express the number of occurrences (n times),  $\langle -myn \rangle$  is appended:

```
Domyn os en meneata.
five-TIMES PR.3SG PR.1SG-OBL see-PAST-3SG
He saw me five times.
```

Unlike cardinal numbers, which follow what they modify, ordinals precede them:

```
rečyrco mja
flower-PL six
```

#### six flowers

mja rečyrca six flower

the seventh flower (Note: zero-indexing!)

Sequential ordinals receive the suffix <-vyn>:

Cesvyn renšyme vylvyn derenentes. zero-ORDS think-CONJV one-ORDS act-IMP.2SG Think first, then act.

 $\langle ces \rangle$  and  $\langle vyl \rangle$  (0 and 1, respectively) may also be used to express a *no* or *yes*. An optional counter word may be suffixed to the number. Counters are also h-forming.

Table 8.2: Counters in Necarasso Cryssesa.

rable 6.2. Counters in Necarasso Cryssesa.		
Counter	Meaning	
-yn	humans	
-dene	large animals	
-ši	small (land) animals excluding insects and spiders	
-tel	fish	
-cyr	insects and spiders	
-nen	woody plants (e. g. trees)	
-mi	other plants (e. g. flowers, grass)	
-je	fruits	
-djos	flat objects (e. g. paper, plates)	
-čei	cylindrical objects	
-ros	balls or other spherical objects	
-ven	books	
-čar	rooms, houses, buildings	
-čyn	weapons	
-gen	other small objects	
-dyn	branches, roots, arms, or legs	
-sei	ring-like objects	
-cjon	spherical objects	

Distributive numbers are formed by reduplicating the unit digit.

## 9 Dependent clauses

### 9.1 | Clauses acting as adjectives

A relative clause; i. e. one standing in place of an adjective has the same syntax as a full sentence (only with a hole filled by the antecedent; i. e. the gap method). If the antecedent is an object of a postposition other than <es> (inside, at, during), then an interrogative pronoun in the *nominative* case stands as the relative pronoun:

Cynmerto crysavan inveči metellon invete. no\_one spider-PL walk-3PL path-OBL walk-3SG No one walks in the path where the spiders walk.

Venor nysos invetato marcssi emte elssaneše elcaršyta. what through walk-PAST-3PL bridge that.ADJ year-TEMPORAL topple-PAST-3SG The bridge through which they walked toppled last year.

## 9.2 | Clauses acting as adverbs

Clauses acting as adverbs must have a conjunction at their end:

Nerveman cenvata anasčyr os acasaygo. book-OBL write-PAST-3SG because PR.3SG punish-PAST-PASS He was punished because he wrote the book.

Nemen en-je enfyresas so ele maryllyn domyra. apple-PL-OBL three-COUNTER.FRUIT buy-SUBJ-2SG if this.ADJ marble-OBL give-1SG I will give you this marble if you buy three apples (for me).

## 9.3 | Clauses acting as nouns

A nominal clause consists of a full sentence followed by <re>:

Ventrel yndaryto re myron releo meston menteato.

parent-PL leave-PAST-3PL CONT after child-PL honey-OBL eat-PAST-3PL After the parents left, the children ate the honey.

## 10 | Nominal constructs

Constructs (<neres>; sg. <neri>) are inflectional features that perform roles of grammatical concepts such as case or aspect, and may affect the meaning of the base word, its grammatical function, or both. In particular, nominal constructs refer to non-peripheral cases that can be replaced with a postpositional phrase.

## 10.1 | The genitive construct

This construct replaces a phrase involving <eas> of, from and implying ownership.

#### 10.1.1 | Genitives of personal pronouns

Table 10.1: Genitives of personal pronouns.

	SG	DU	PL
1	enas my	entas	entras our
2	evas your	evras	eftras your
3	ores his, her, its	oten	oras their

→ Reflexive and reciprocal genitives

These are <nemesel> and <cyprasel>, respectively.

→ Genitives of obviate pronouns

The first two obviates,  $\langle ela \rangle$  and  $\langle emta \rangle$ , are  $\langle elen \rangle$  and  $\langle emten \rangle$  in their genitive forms. The other three suppletive obviates are inflected as nouns (e. g.  $\langle enros \rangle \rightarrow \langle enresra \rangle$ ).

The remainder are inflected as such:

• Singular: <reldo>

• Dual: <rerdo>

• Plural: <ryldo>

#### 10.1.2 | Genitives of inanimate nouns

Genitives are h-forming if the vowel of the ending of the base noun is  $\langle a \rangle$  or  $\langle o \rangle$ , and conditionally erasing otherwise.

Old ending	Singular possessor	Dual possessor	Plural possessor
-a, -e, -i, -o	-asa	-asar	-asan
-as, -es, -is, -ys	-asas	-asnas	-asnan
-an, -en, -yn	-ica	-icen	-irnena
-ass, -ess, -yss, -erss	-essa	-essno	-essenar
-el, -yl	-yl	-yl	-yl
-os, -on	-esra	-esran	-esrena
-or	-era	-eran	-erena
-ar, -er, -yr, -ir	-yra	-yrar	-yro

#### 10.1.3 | Genitives of animate nouns (non-honorific)

Nouns describing living forms, heavenly bodies, emotions, and personal characteristics are animate.  $\langle -\text{el} \rangle$  is appended to nouns ending with  $\langle -\text{s} \rangle$  or  $\langle -\text{ss} \rangle$ ,  $\langle -\text{ryl} \rangle$  to those ending with vowels, and  $\langle -\text{yl} \rangle$  to all others.

#### 10.1.4 | Honorific genitives

Honorific genitives of animate nouns append  $\langle -\text{or} \rangle$  to  $\langle -\text{el} \rangle$  genitives and  $\langle -\text{ar} \rangle$  to  $\langle -\text{yl} \rangle$  genitives.

#### 10.2 The inessive construct

This construct replaces a phrase involving  $\langle es \rangle$  inside in the context of location. It is h-forming if the vowel of the ending is  $\langle a \rangle$  or  $\langle o \rangle$ , and conditionally erasing otherwise.

Table 10.3: The inessive construct.

Old ending	Singular ending	Dual ending	Plural ending
-a, -e, -i, -o	-ane	-anen	-aner
-as, -es, -is, -ys	-asne	-asnen	-asner
-an, -en, -yn	-icen	-icene	-icyn
-ass, -ess, -yss, -erss	-enso	-ensar	-ensan
-el, -yl	-yne	-yne	-yne
-os, -on	-enas	-enan	-eno
-or	-erane	-eraner	-erani
-ar, -er, -yr, -ir	-yrnea	-yrnear	-yrneo

#### 10.3 | The superessive construct

This construct replaces a phrase involving  $\langle yl \rangle$  on top of. It is formed from the inessive construct by performing one of the following actions:

- 1. Appending an ⟨-l⟩ on a vowel-terminal form (changing the final ⟨-i⟩ to ⟨-y⟩ and changing ⟨-a⟩ to ⟨-e⟩ if necessary)
- 2. Replacing a terminal  $\langle -s \rangle$  with  $\langle -lle \rangle$
- 3. Replacing a terminal  $\langle -r \rangle$  with  $\langle -le \rangle$
- 4. Replacing a terminal  $\langle -n \rangle$  with  $\langle -del \rangle$

#### 10.4 The pertingent apudessive construct

This construct replaces a phrase involving  $\langle cyl \rangle$  on a vertical surface. It is formed from the supressive construct by performing one of the following actions:

- 1. Replacing the last <-ll-> (from <-lle>) with <-css->
- 2. Replacing the final  $\langle -l \rangle$  with  $\langle -ss \rangle$
- 3. Replacing the last medial  $\langle -l-\rangle$  with  $\langle -\check{c}-\rangle$

#### 10.5 | The ablative construct

This construct replaces a phrase involving  $\langle eas \rangle$  from in context of location. It is formed from the genitive form by replacing the ending with  $\langle -eda \rangle$ .

#### 10.6 | The allative construct

This construct replaces a phrase involving \( \ar\) to, toward or \( \arthinsis \) toward in context of location. It is formed from the genitive form by prefixing \( \arthinsis \) car-\>.

#### 10.7 | The descriptive construct

This construct replaces a phrase involving <eas> of in context of description (composition, pertinence, resemblance). It is formed by removing any terminal vowels and replacing the ending of the nominative with <-esa>, and can be used as an adjective. This construct is conditionally erasing.

By using the adjective-to-adverb conversion, the construct can also play an adverbial (semblative) role.

#### 10.8 | The prolative construct

This construct replaces a phrase involving  $\langle nysos \rangle$  through in context of movement. It is formed by appending an  $\langle -s \rangle$  to the ablative construct.

#### 10.9 | The temporal construct

This construct replaces a phrase involving  $\langle es \rangle$  on in context of time. It is formed by appending  $\langle -\check{s}e \rangle$  to the inessive construct.

#### 10.10 | The temporal accusative construct

This construct replaces a phrase involving <nysos> for in context of an interval of time. It is formed by appending <-ten> to the inessive construct.

#### 10.11 | The instrumental construct

This construct replaces a phrase involving  $\langle \text{cynsso} \rangle$  with in context of using an instrument. It is formed by removing the final consonant from the nominative, changing final  $\langle -\text{i} \rangle$  to  $\langle -\text{y} \rangle$ , and appending  $\langle -\text{cyn} \rangle$ . By negating this construct with  $\langle \text{ci} \rangle$ , the meaning changes to "without X".

#### 10.12 The comitative construct

This construct replaces a phrase involving  $\langle \text{cynsso} \rangle$  with in context of company. It is formed from the instrumental by changing the final  $\langle -n \rangle$  to  $\langle -s \rangle$ . By negating this construct with  $\langle \text{ci} \rangle$ , the meaning changes to "without X".

#### 10.13 The benefactive construct

This construct replaces a phrase involving  $\langle nas \rangle$  on behalf of. It is formed from the prolative construct by replacing the final  $\langle -as \rangle$  with:

- 1. <-en> for an animate noun (on behalf of a person, tree, star, etc.) this is an h-forming inflection.
- 2. <-as> for an inanimate abstract noun (on behalf of a country, a religion, etc.)
- 3. <-an> for an inanimate concrete noun (on behalf of a rock, the book, etc.)

#### 10.14 | The adessive construct

This construct replaces a phrase involving  $\langle ro \rangle$  beside in context of adjacency. It is formed from the inessive construct by:

- 1. Appending  $\langle -r \rangle$  for vowel-final forms (and changing  $\langle -i \rangle$  to  $\langle -y \rangle$ )
- 2. Replacing a final  $\langle -s \rangle$  with  $\langle -llo \rangle$
- 3. Replacing a final  $\langle -n \rangle$  with  $\langle -ro \rangle$

#### 10.15 | The topic construct

This construct replaces a phrase involving  $\langle eas \rangle$  *about* in context of topic. It is formed from the genitive form by:

- 1. changing an  $\langle -a- \rangle$  or  $\langle -o- \rangle$ -ending to use  $\langle -e- \rangle$
- 2. changing an  $\langle -e- \rangle$ -ending to use  $\langle -i \rangle$  on an open ending or  $\langle -y- \rangle$  on a closed ending
- 3. changing a ⟨-y-⟩-ending to use ⟨-yr⟩ (removing an existing coda)

#### 10.16 | Prefixes

Table 10.4: Prefixes in Necarasso Cryssesa.

Prefix	Meaning	Behaviour
c(i)-	negative	n/a
ar-	augmentative	n/a
fe-	dubitative ("so-called")	Conditionally erasing
fy-	pejorative	h-forming
go-	profanitative ("fucking")	h-forming
dene-	aggregate (e. g. tree $\rightarrow$ forest)	Unconditionally erasing

# 11 | Constructs on other parts of speech

#### 11.1 | Constructs on adjectives

As mentioned in section 5.1, adverbs are formed from adjectives by replacing the ending with  $\langle$ -amyn $\rangle$ .

#### 11.1.1 | The quality noun

The quality noun is a noun referring to the quality of having a trait outside of any measure, such as happiness, or the depth of one's personality. It is formed by replacing the ending of an adjective with <-erss>.

#### 11.1.2 | The measurement noun

The measurement noun is one referring to something that can be measured, such as the depth of a pool or the height of a tree. It is formed by replacing the ending with  $\langle en \rangle$ .

#### 11.1.3 | Negation

An adjective is negated by prefixing it with  $\langle ci \rangle$  (or if it is vowel-initial,  $\langle c \rangle$ ). Those starting with  $\langle c \rangle$  receive  $\langle cyr \rangle$ . For example,  $\langle esel \rangle$  (wide) can be negated into  $\langle cesel \rangle$  (narrow).

#### 11.1.4 | Noun conversion

Sometimes, it might be useful to convert an adjective to a noun that refers to an entity with the quality in question. The ending is replaced with  $\langle -ar \rangle$ , with the consonant immediately before it becoming  $\langle n \rangle$  if it was a nasal,  $\langle l \rangle$  if it was an approximant and  $\langle s \rangle$  otherwise. For instance,  $\langle merva \rangle$  (large) to  $\langle mersar \rangle$  (a large thing).

## 11.2 | Constructs on verbs

Table 11.1: Constructs on verbs.

Name	Description	Formation
Nominal		
Inanimate agent	Describes something that per-	$\langle -d \rangle$ to $\langle -llyr \rangle$
Animate agent	forms an action Describes someone who performs	Append <-yr>
Animate co-agent	an action Describes someone who performs	Circumpend (cynys)
Action	an action with someone else A noun describing an act of doing something	<-ad / -yd> to <-ata>
Product	The product of an action	<-ad / -yd> to <-ertess>
Patient	The receiver of an action	<-ad / -yd> to <-er>
Location	Where the action happens	<-ad / -yd> to <-antos>
Temporal	The time period during which the	$\langle -ad / -yd \rangle$ to $\langle -entar \rangle$
	action happened	
Adjectival		
Outgoing ability	Whether one is capable of doing	<-ad / -yd> to <-efrys>
Incoming ability	something. Whether one is capable of receiving an action.	<-ad / -yd> to <-enyn>
Tendency	Whether one tends to do something.	<-ad / -yd> to <-enfa>
Verbal		
Inceptive	Beginning an action	Prefix ⟨es-⟩
Terminative	Ending an action	Prefix 〈car-〉
Imminent	An action just about to occur	Prefix <sel-></sel->
Precessive	An action that has just occurred	Prefix <ter-></ter->
Scattering	e. g. break → shatter	Prefix <ver-></ver->

## 12 | Units of measure

Necarasso Cryssesa uses a different system of measures than other languages.

## 12.1 | Time

Unit	Definition	Equivalent
elsse (year)	403 envo	408.4 days
enva (day)	32 eneo	24.32 hours
enean	48 aedo	45.60 minutes
aedar	64 ryrenčyn	57.00 seconds
ryrenten		0.8906 seconds

## 12.2 | Length

Unit	Definition	SI Equivalent
navsa	16 elečyn	1.90 km
eleten	12 večyn	119 m
veten	8 avanto	9.92 m
avanta	6 reašyr	1.24 m
reaser	24 ceanto	20.7 cm
ceanta	256 sanyn	8.6 mm
sanen		3.4 µm

## 12.3 | Area

Unit	Definition
etaga	48 samedyn
sameden	256 tavernyn
tavernen	1 avanta squared

## 12.4 | Volume

Unit	Definition	SI Equivalent
rytaljon	12 geonyn	1277 L
geonen	12 myčyno	104.6 L
myčyna	12 egyn	8.87 L
	(1 reaser cubed)	
egen	12 reseo	0.740 L
resea	1536 aenyn	61.6 mL
aenen		40.1 μL

## 12.5 | Mass

Unit	Definition	SI Equivalent
tegane	3 mydo	8.87 kg
myda	48 deso	2.96 kg
desar	30 agyši	61.6 g
agyse	256 dašyn	1.28 g
dasen	3072 atreno	5.01 mg
atrenar		1.63 μg

## A Dictionary

```
